

Smart Cities Communications

Presented by:
Yoram Orzach

"Be nice to nerds. You may end up working for them. We all could."

Charles J. Sykes

Lecture Contents

- Smart City Structure and applications requirements
- Smart City network structure
- Communications technologies for the smart city networks
- Survivability and security

Smart City Structure and Applications

Smart City Structure

High-tech and Offices

Beach

Urban Area

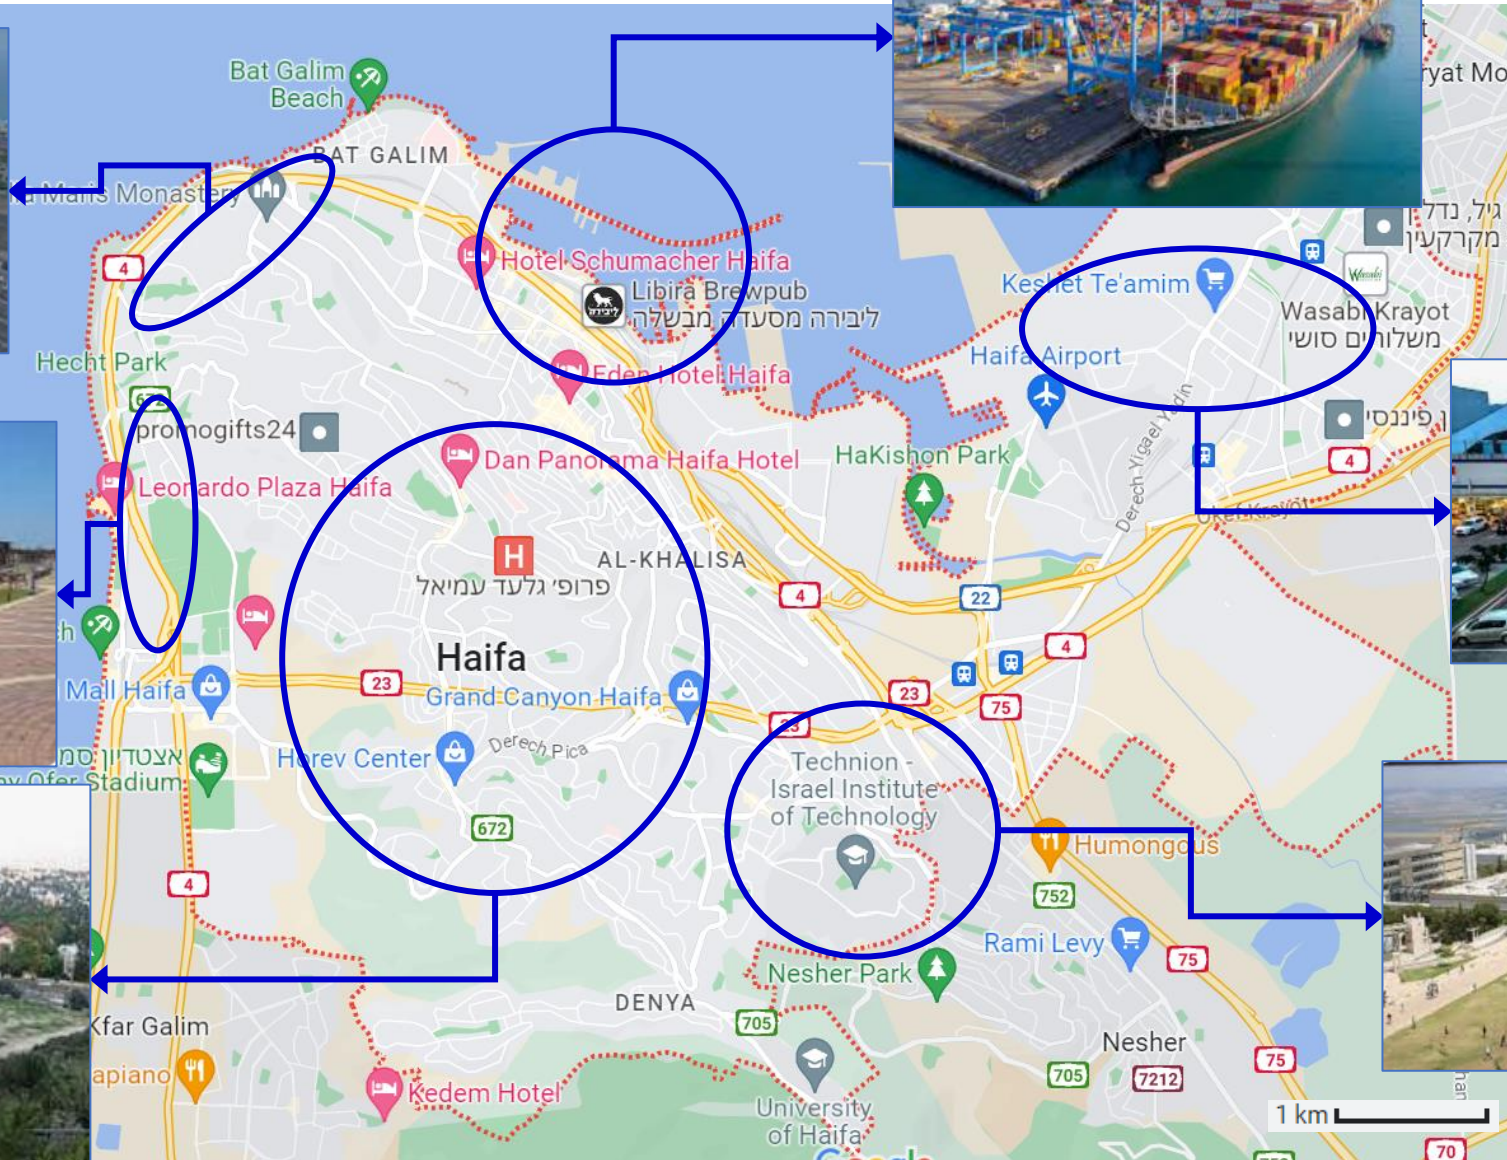

Sea port

Shopping Area

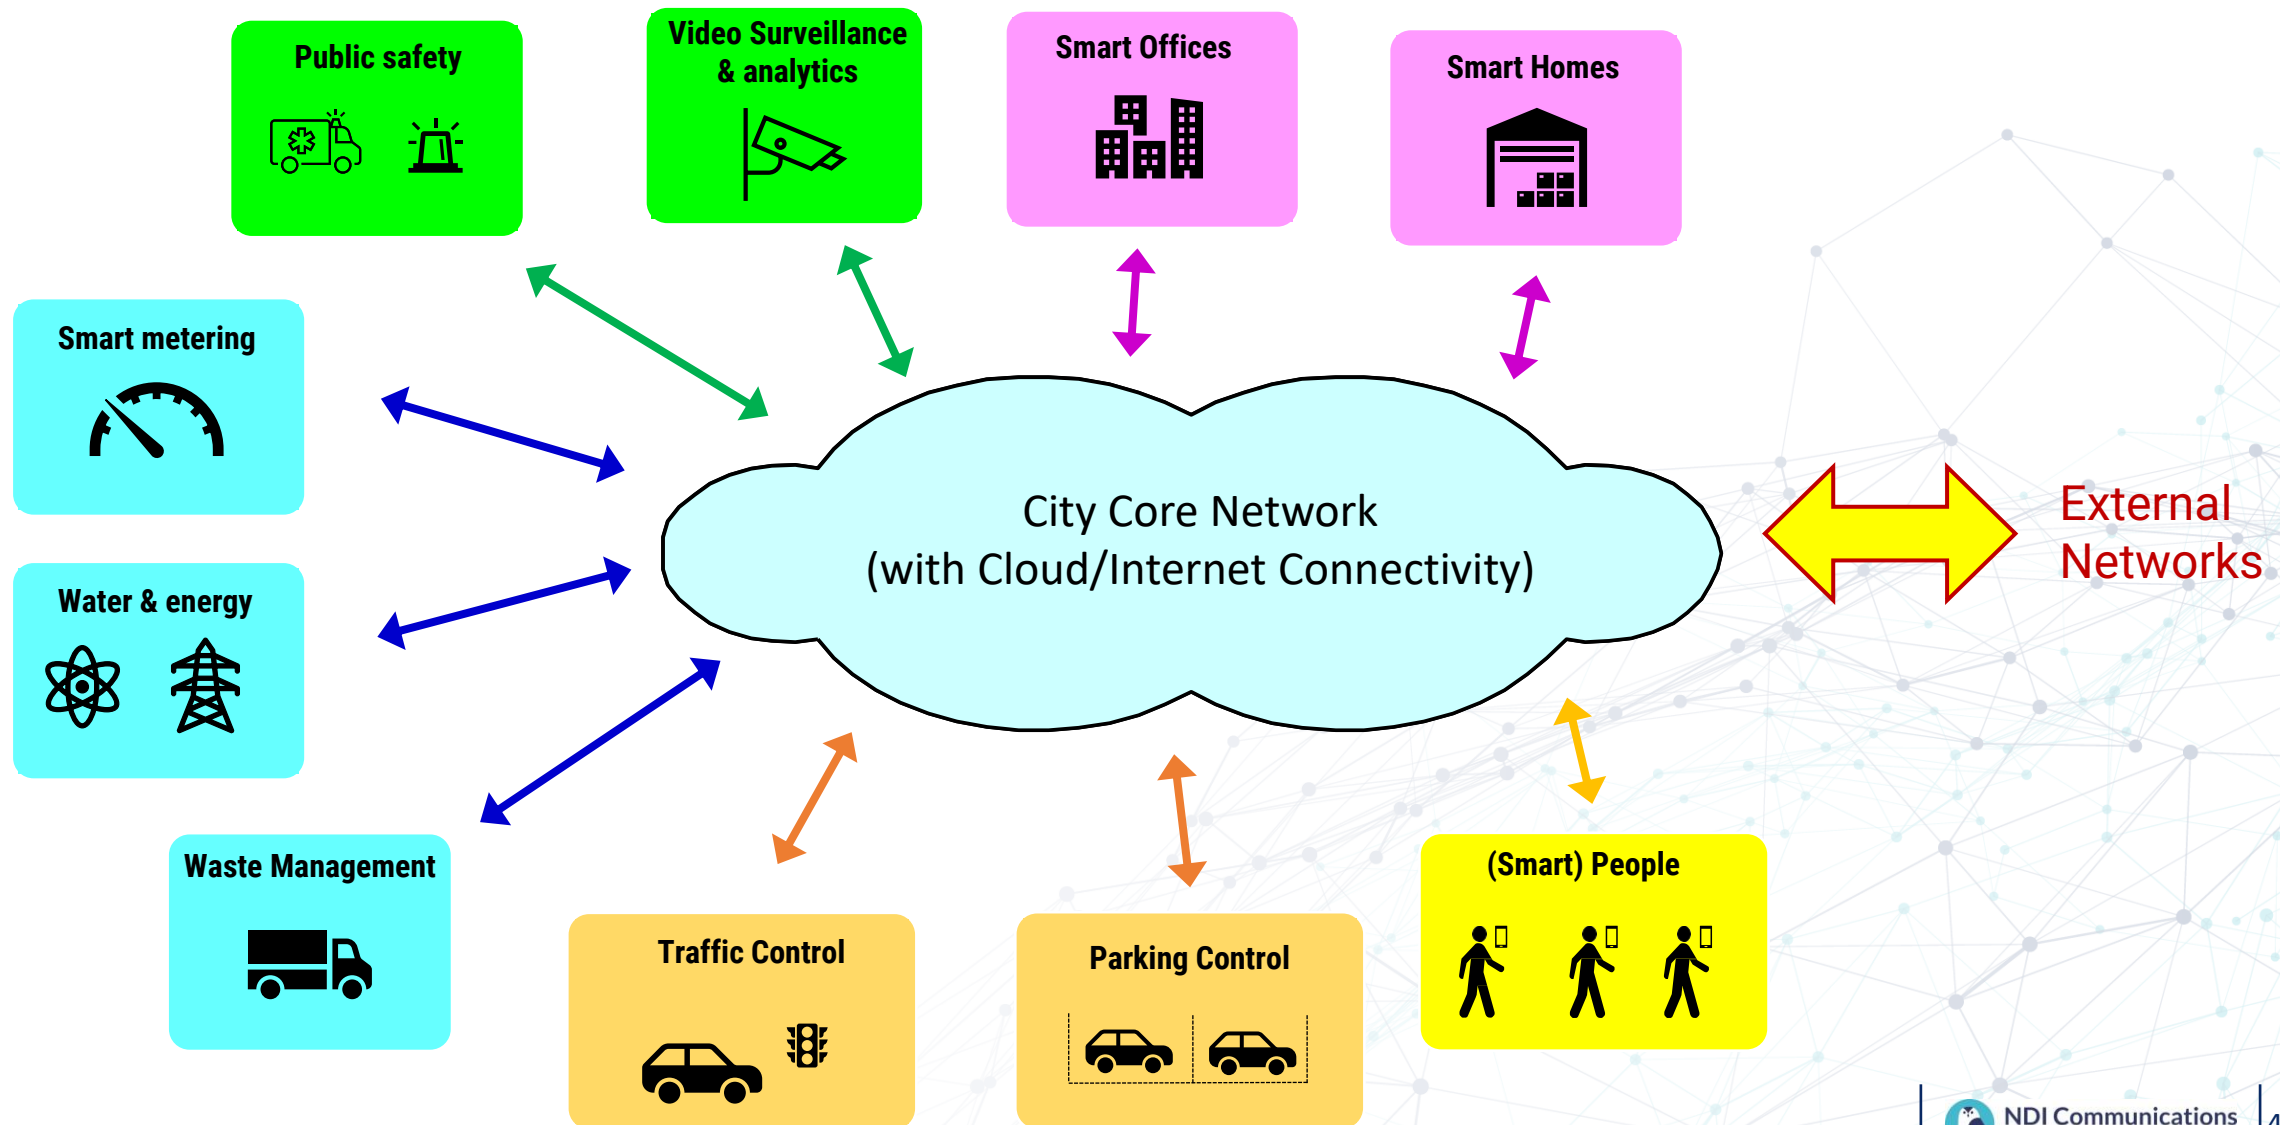

University

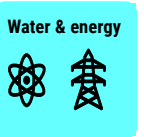

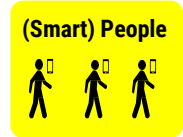

Smart City Structure and Applications

Application Types

Smart City Structure and Applications

Application Requirements

	Public safety 	Video Surveillance & analytics 	Water & energy 	Smart metering 	Waste Management 	Smart Offices 	Smart Homes 	(Smart) People 	Parking Control 	Traffic Control 
High Bandwidth (Symm/Asymm)	V	V				V	V	V	V	V
Low Delay/Jitter	V					V	V			V
High density			V	V		V				V
High Reliability	V	V								V

"Experience is a hard teacher because she gives the test first, the lesson afterwards"

Vernon Sanders Law

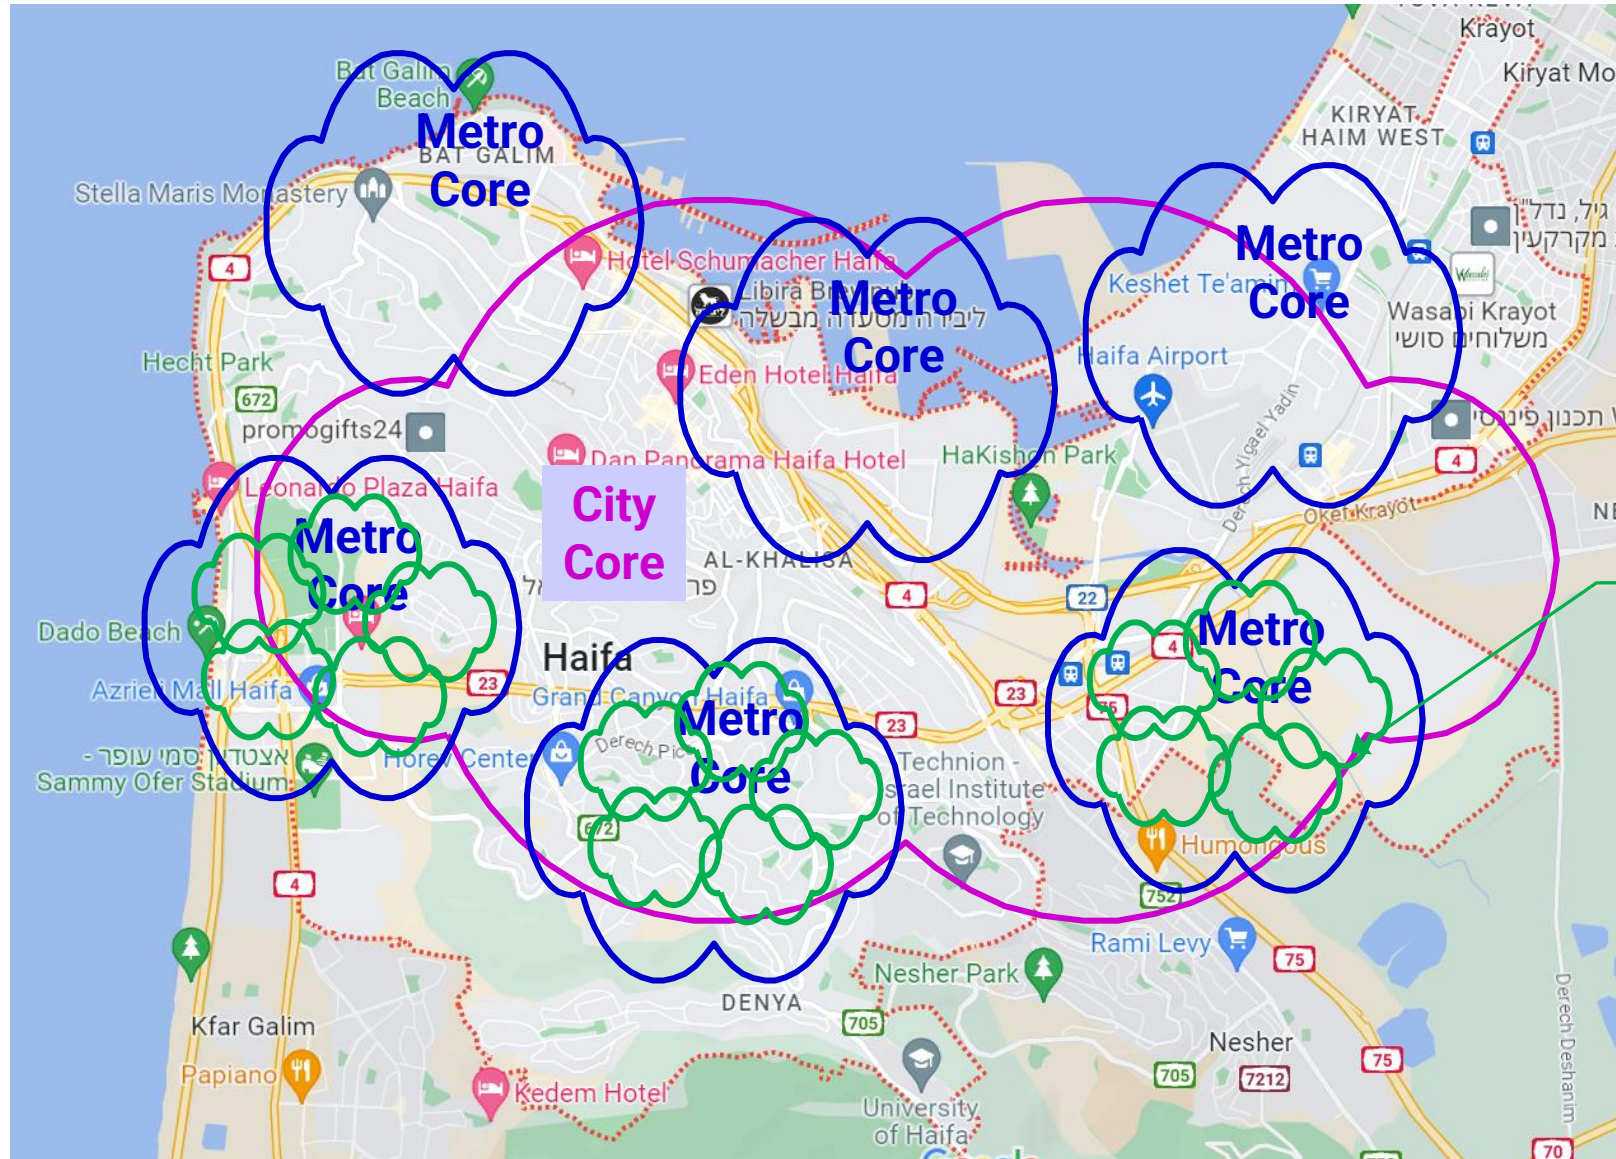

Lecture Contents

- Smart City Structure and applications requirements
- Smart City network structure
- Communications technologies for the smart city networks
- Survivability and security

Smart City Network Structure

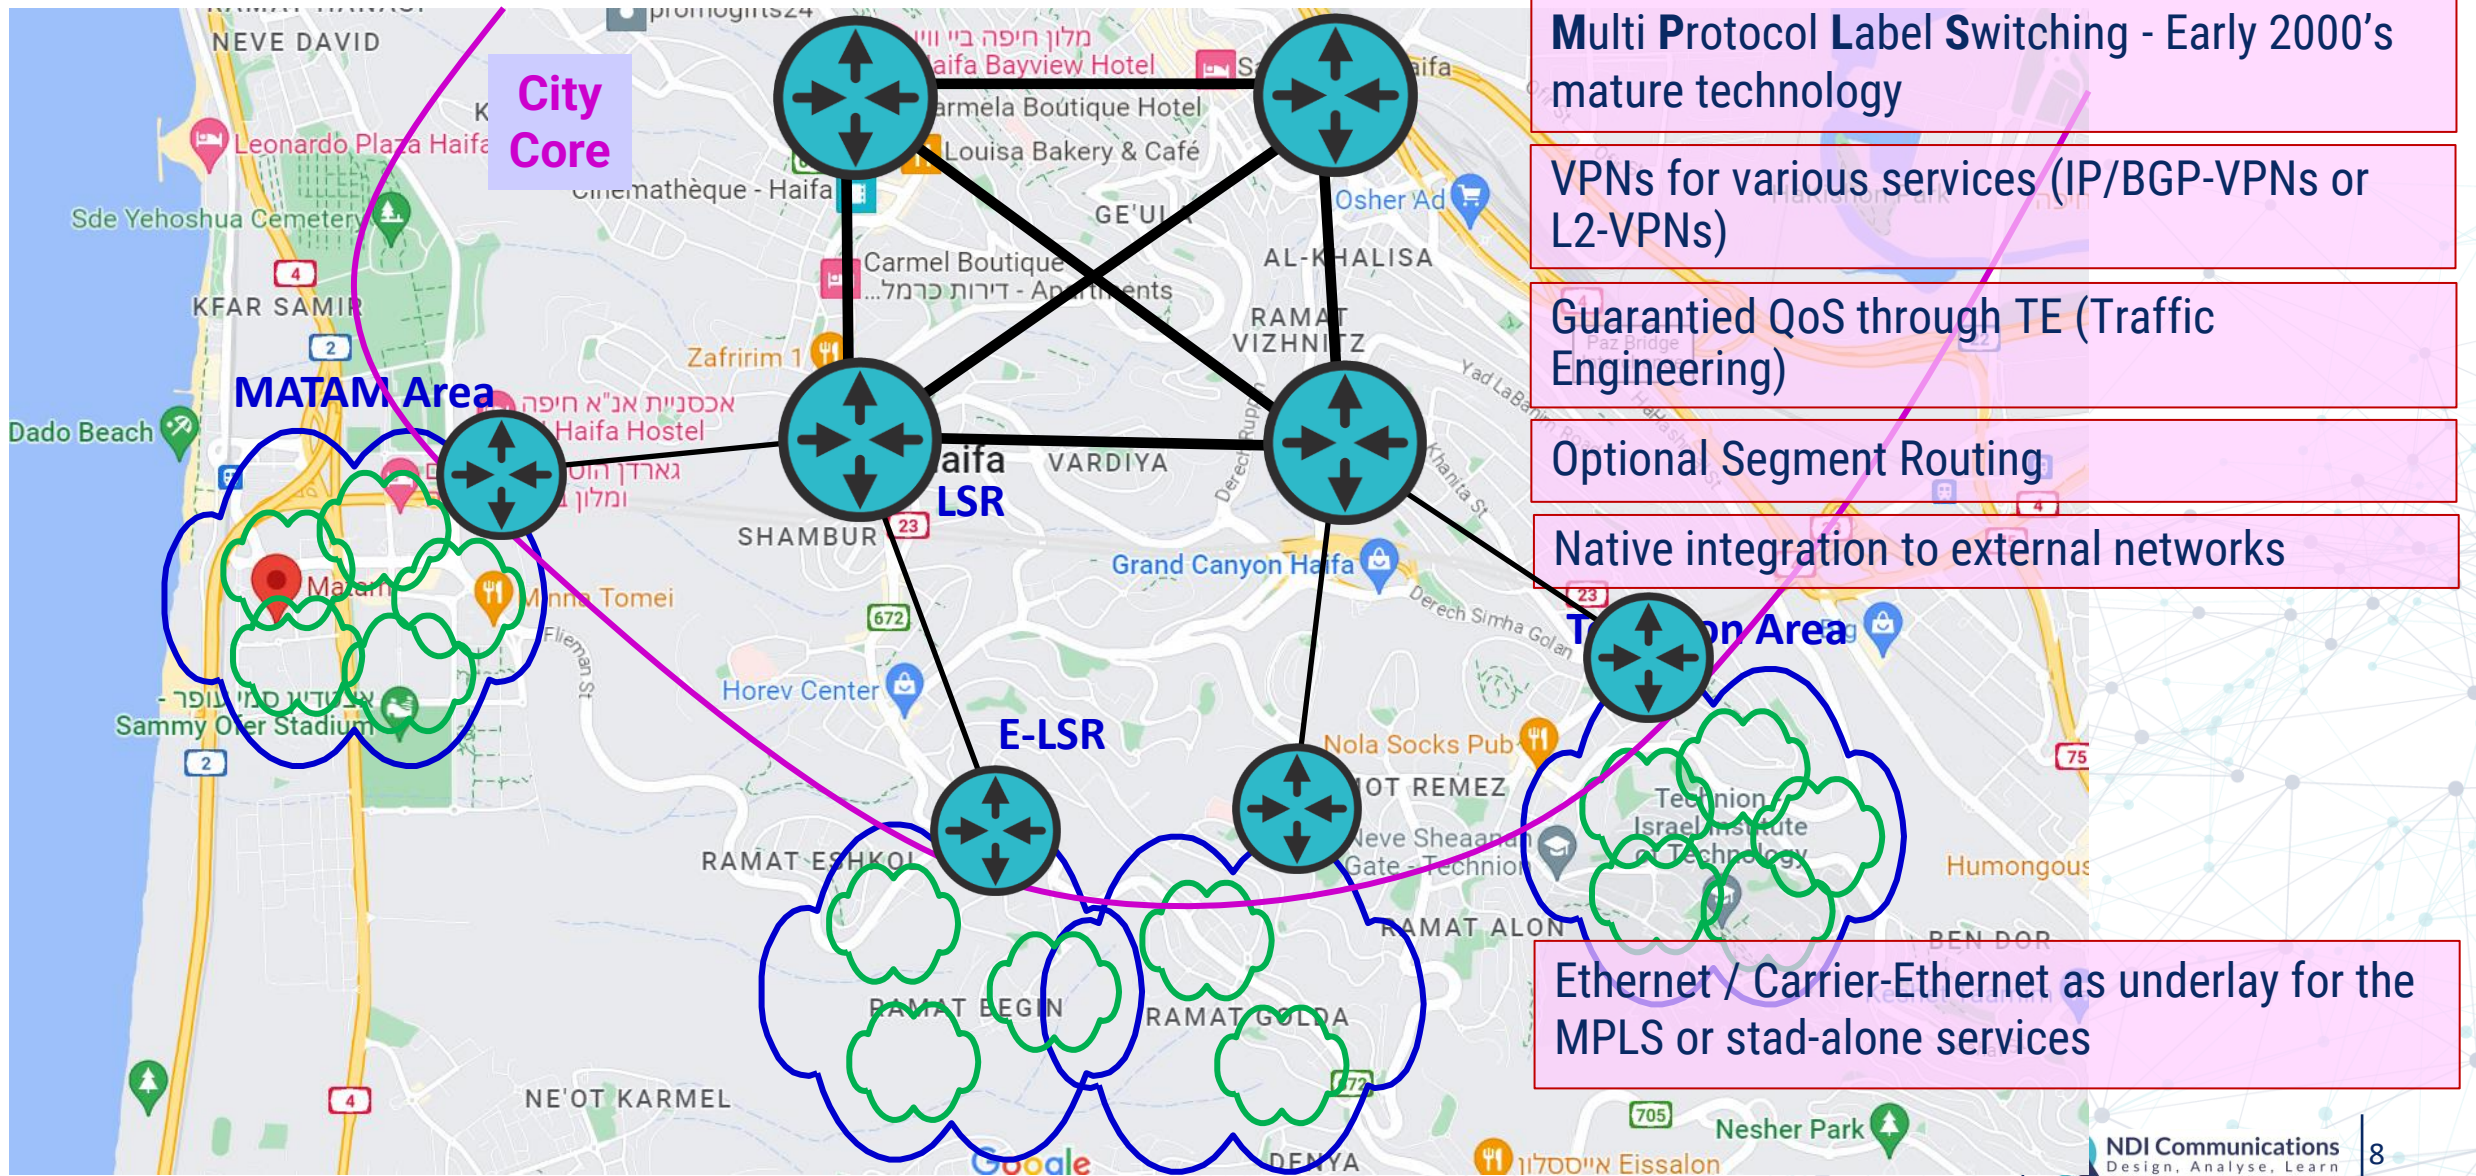

The Network Structure – Overall Architecture

Metro Access

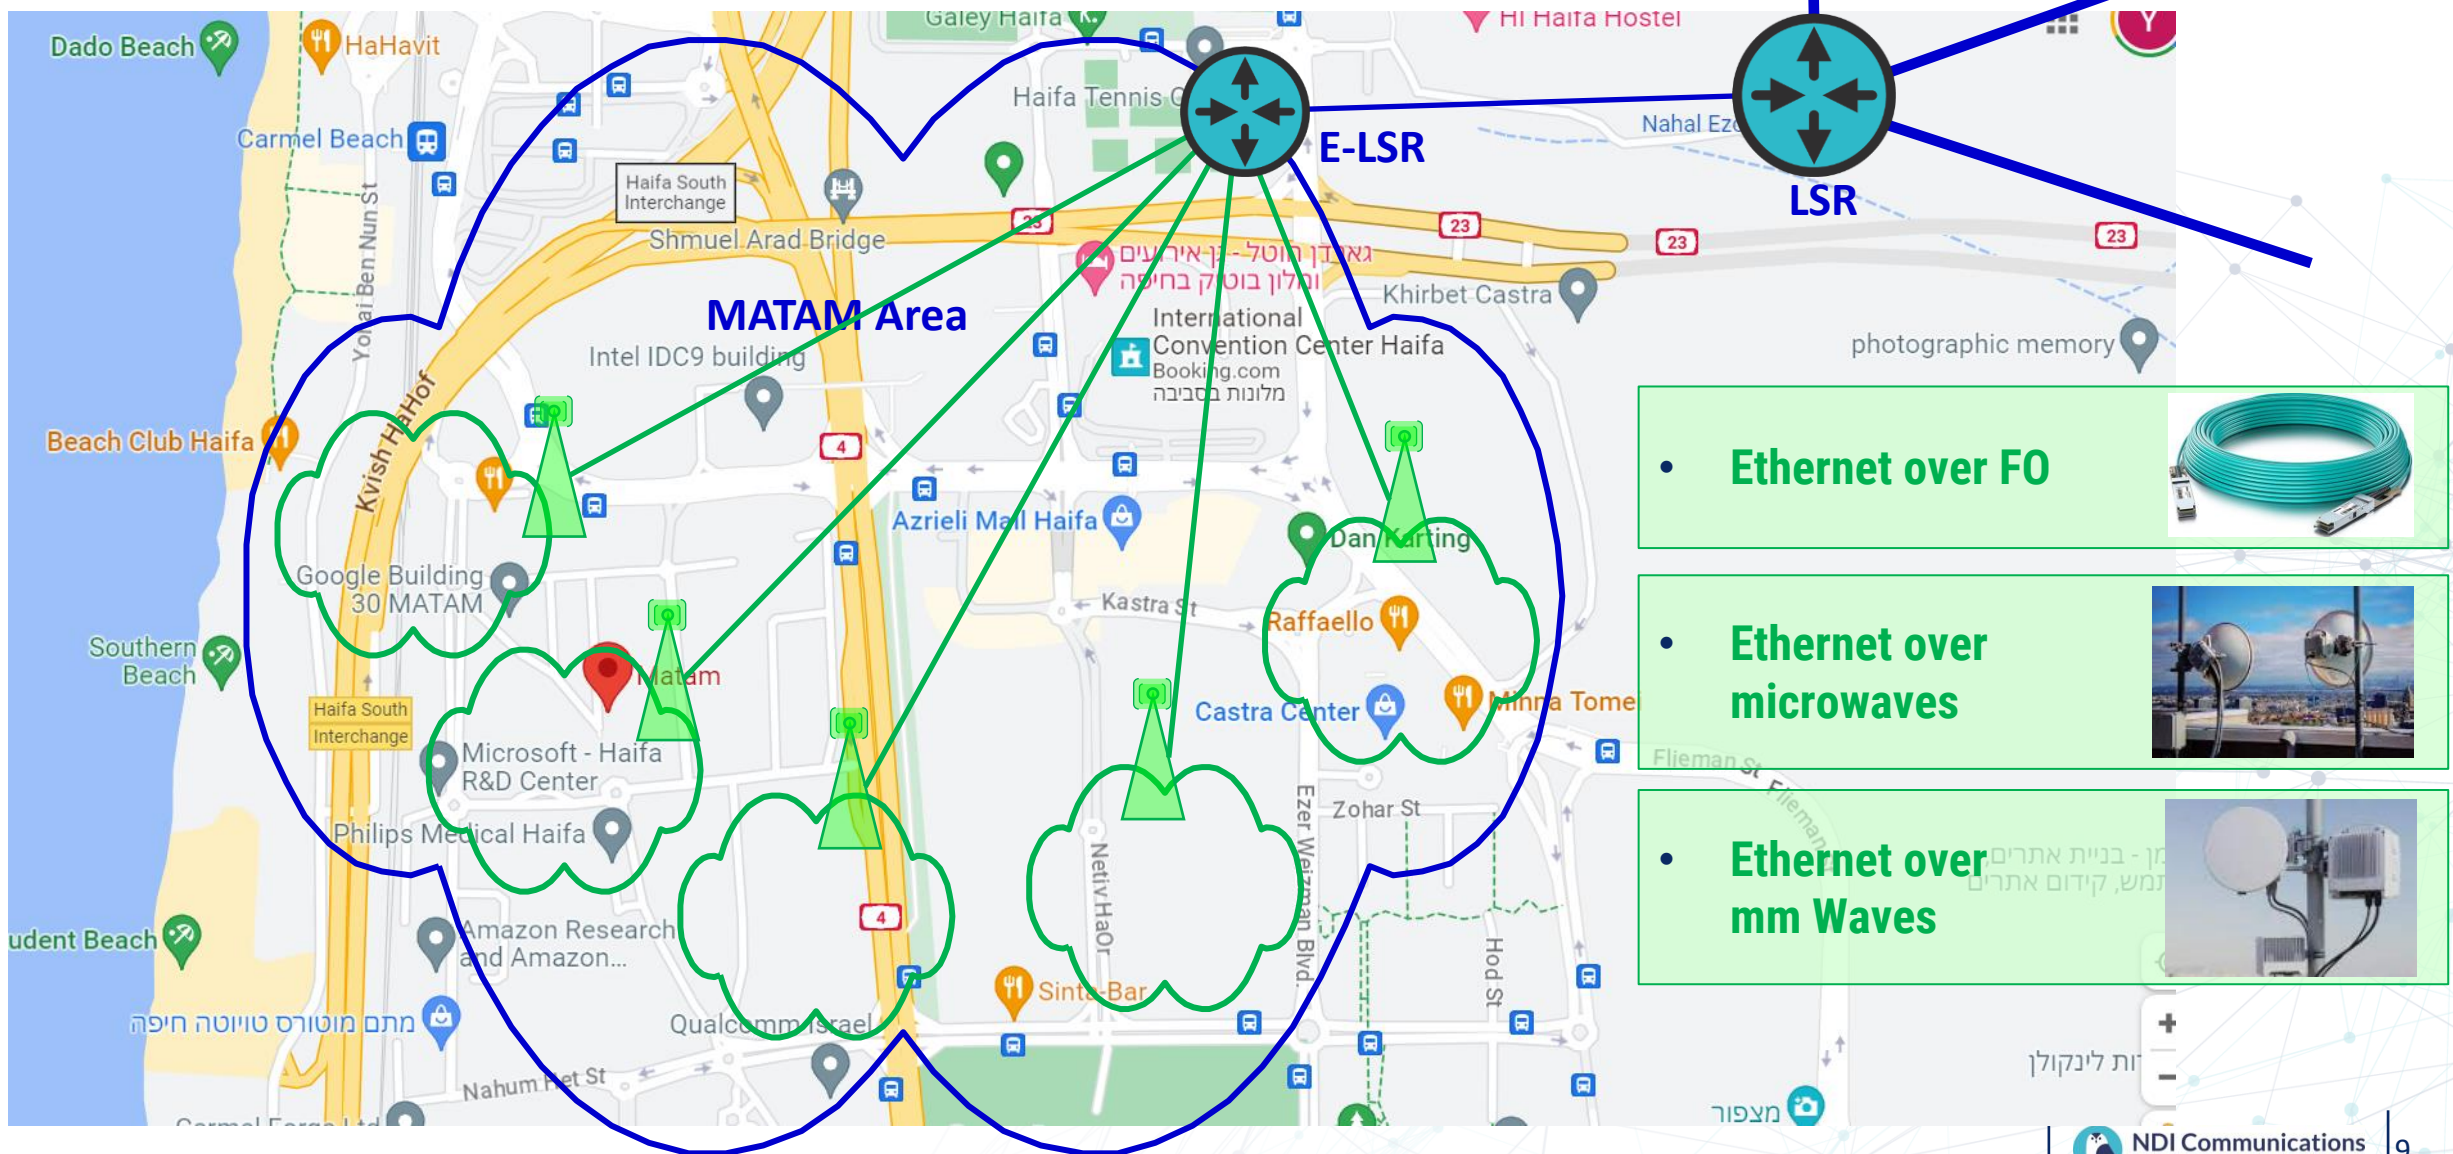

Smart City Network Structure

The Network Structure – Technologies – the Core Network

Smart City Network Structure

The Network Structure – Technologies – the Access Core Network

Smart City Network Structure

The Network Structure – Technologies – the Access Network

Cellular – 4G/5G, 6G

Wireless – Wi-Fi -4/5/6, 7 (2024)

IoT Technologies (802.15.4, BLE....)

"Success consists of going from failure to failure without loss of enthusiasm."

Winston S. Churchill

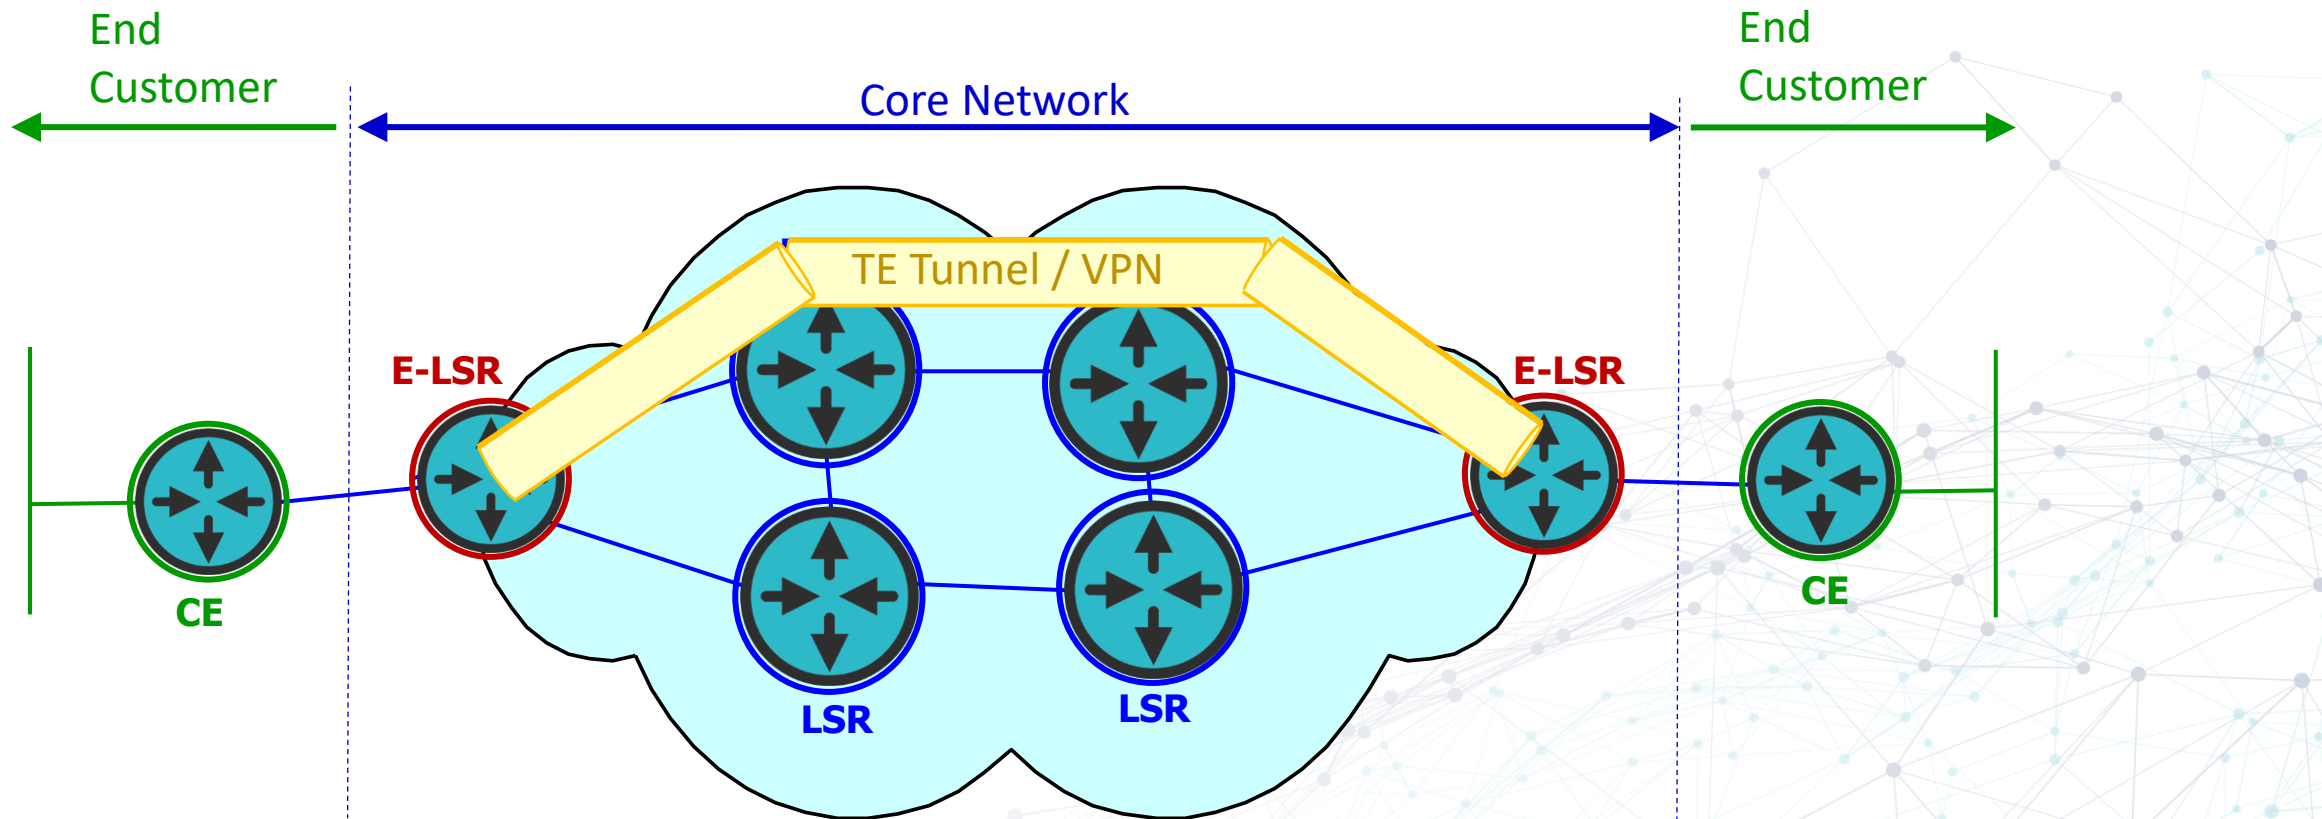

Lecture Contents

- Smart City Structure and applications requirements
- Smart City network structure
- Communications technologies for the smart city networks
- Survivability and security

Smart City Network Structure

The Network Structure – Technologies – Core and Metro Core

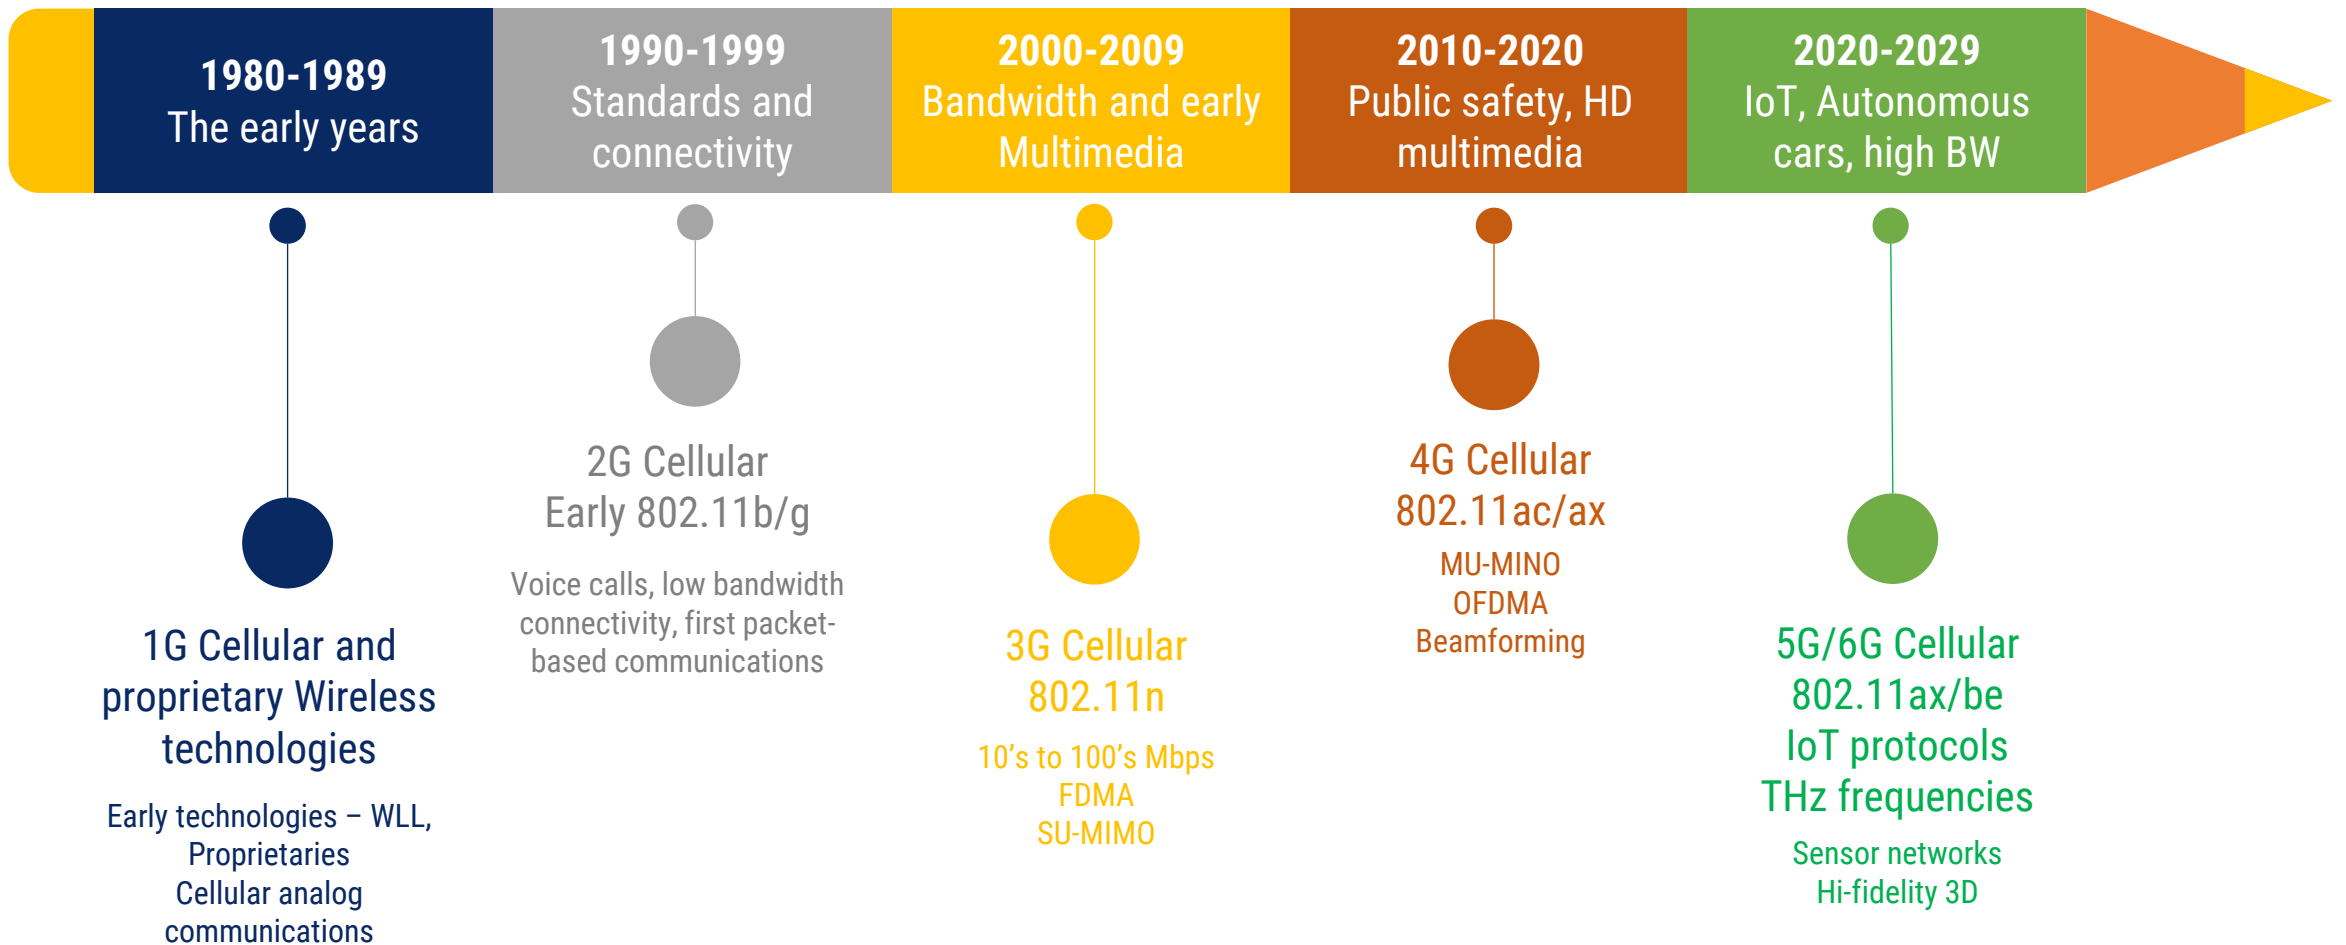

Smart City Network Structure

The Network Structure – Technologies – the Access Networks – Radio Technologies

Technology	Protocol	Frequency	Throughput	Range
4G/LTE	3GPP R8 to R14	850/900/1800/1900/ 2100...MHz	10's of Mbps and higher	10's of meters up to 10's of Km's
5G/6G	3GPP R15 to R18 (5G) R19 (Early 6G)	Sub-1G up to 60GHz+	100's of Mbps to 100's of Gbps	10's of meters up to 10's of Km's
WiFi-4/5/6/7	Wifi / 802.11	2.4G/5G/6GHz	10Gbps+ per AP	PtP – Km's PtMP – 100's meters
LoRa/LoRaWAN	ITU-T Y.4480 / LoRa Alliance	433, 868, 900 MHz	0.3 kbps to 50 kbps	20Km's
Bluetooth Low Energy (BLE)	Bluetooth	2.4GHz	1Mbps	10's meters
ZigBee	802.15.4	2.4GHz	Mbps's	10's to 100's meters
PtP / PtMP Microwaves	Proprietaries	5-6GHz to 60GHz+	Gbps to 10's of Gbps's	10's of Km's, 100's meters (mm Waves)

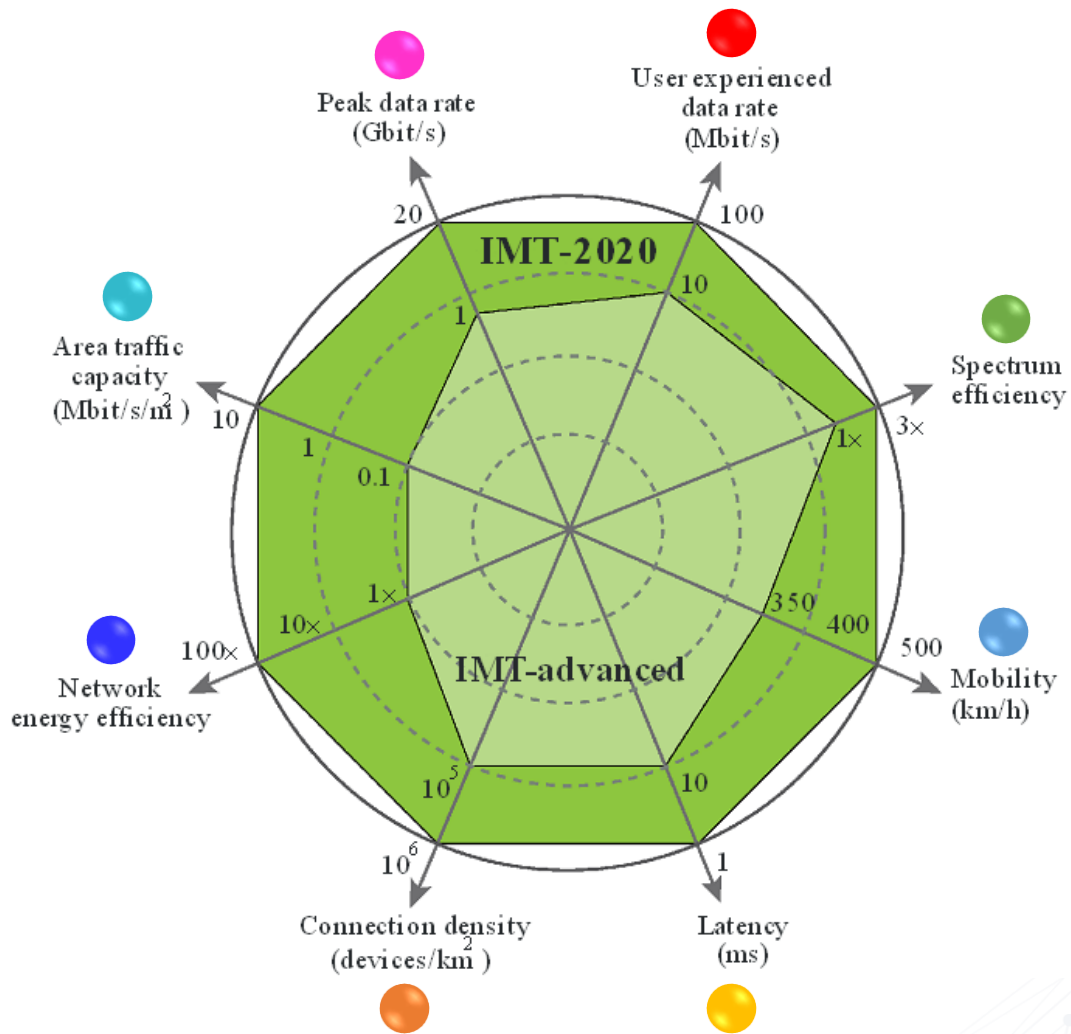

Wireless and Cellular history

How it started and where we are today

5G Objectives

5G objectives by ITU-R

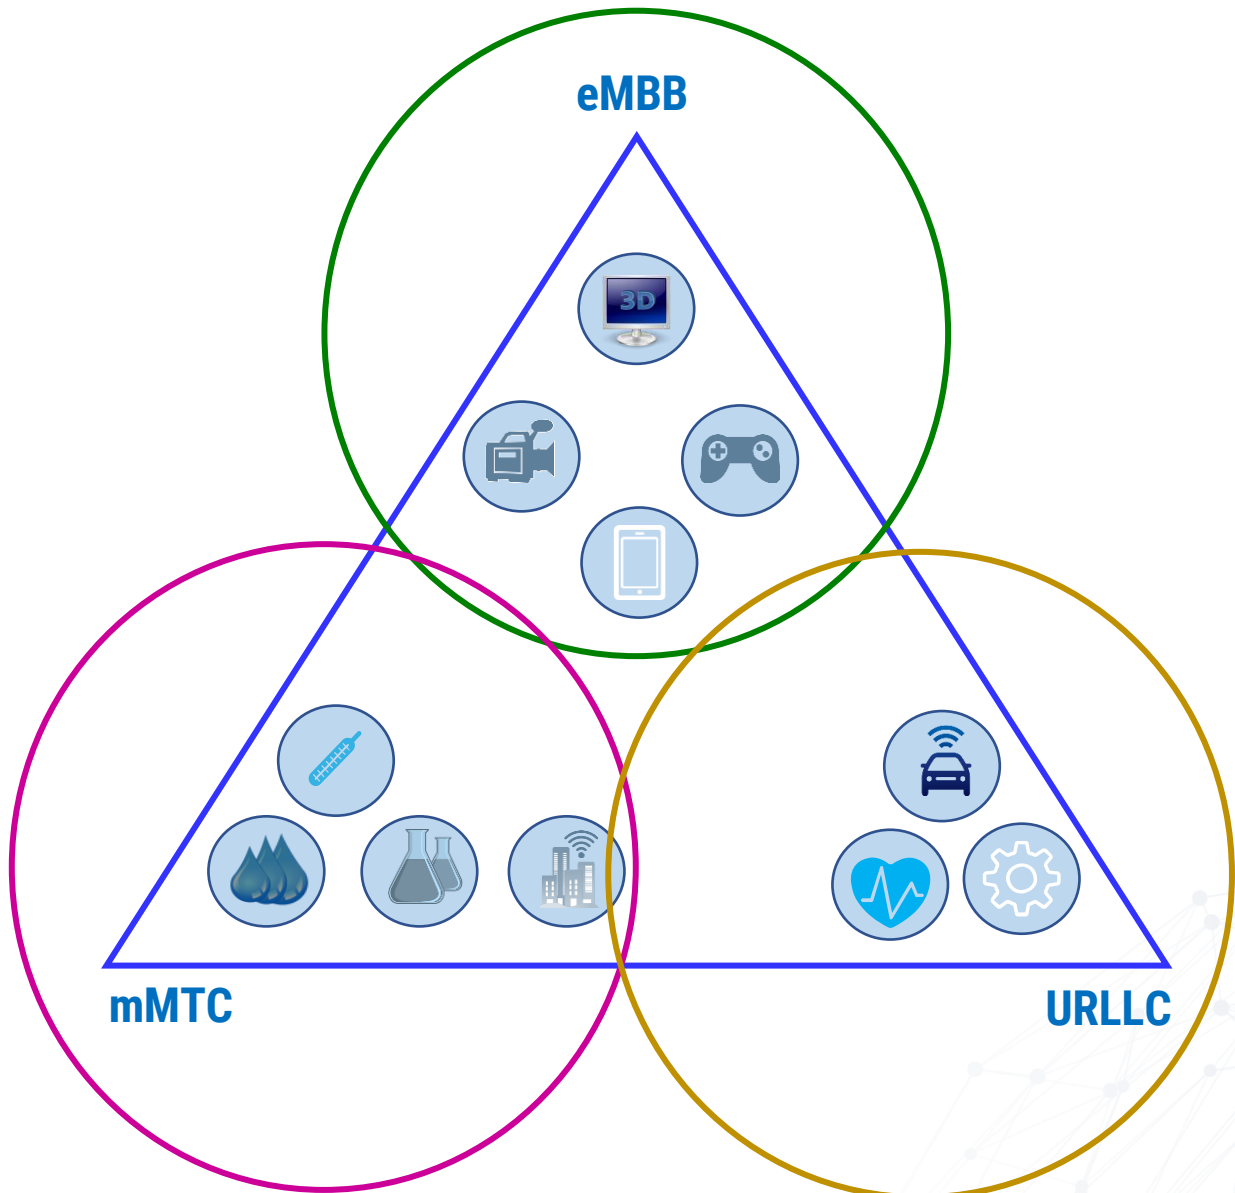

- USER EXPERIANCE**
From 10Mbps to 100/50Mbps (Downlink/Uplink)
- PEAK DATA RATE**
From 1Gbps to 20Gbps/10Gbps (Downlink/Uplink)
- AREA TRAFFIC CAPACITY**
From 0.1Mbits/Sec/m² to 10Mbits/Sec/m²
- ENERGY EFFICIENCY**
X100 improvement from 4G
- CONNECTION DENSITY**
From 10³ to 10⁶ Devices/Km²
- LATENCY**
User/data plane - from 10mS in 4G to 1mS in 5G (3GPP target is 0.5mS)
Control plane - 20mS (3GPP target 10mS)
- MOBILITY**
From 350Km/hour to 500Km/hour connectivity in motion
- SPECTRAL EFFICIENCY**
3 times more then 4G - 30/15 bits/sec/Hz (Downlink/Uplink)

Source: ITU-R, M.2083-0 (09/2015)

5G Applications Requirements

Requirements to be supported by the 5G network

eMBB (enhanced Mobile Broadband)

- Fixed Wireless Access (FWA)
- High Speed Home / SOHO Broadband

➔ High bandwidth
Average and peak

mMTC (massive Machine Type Communications)

- Massive connectivity
- IoT and Sensor networks

➔ High density
Low energy
High reliability

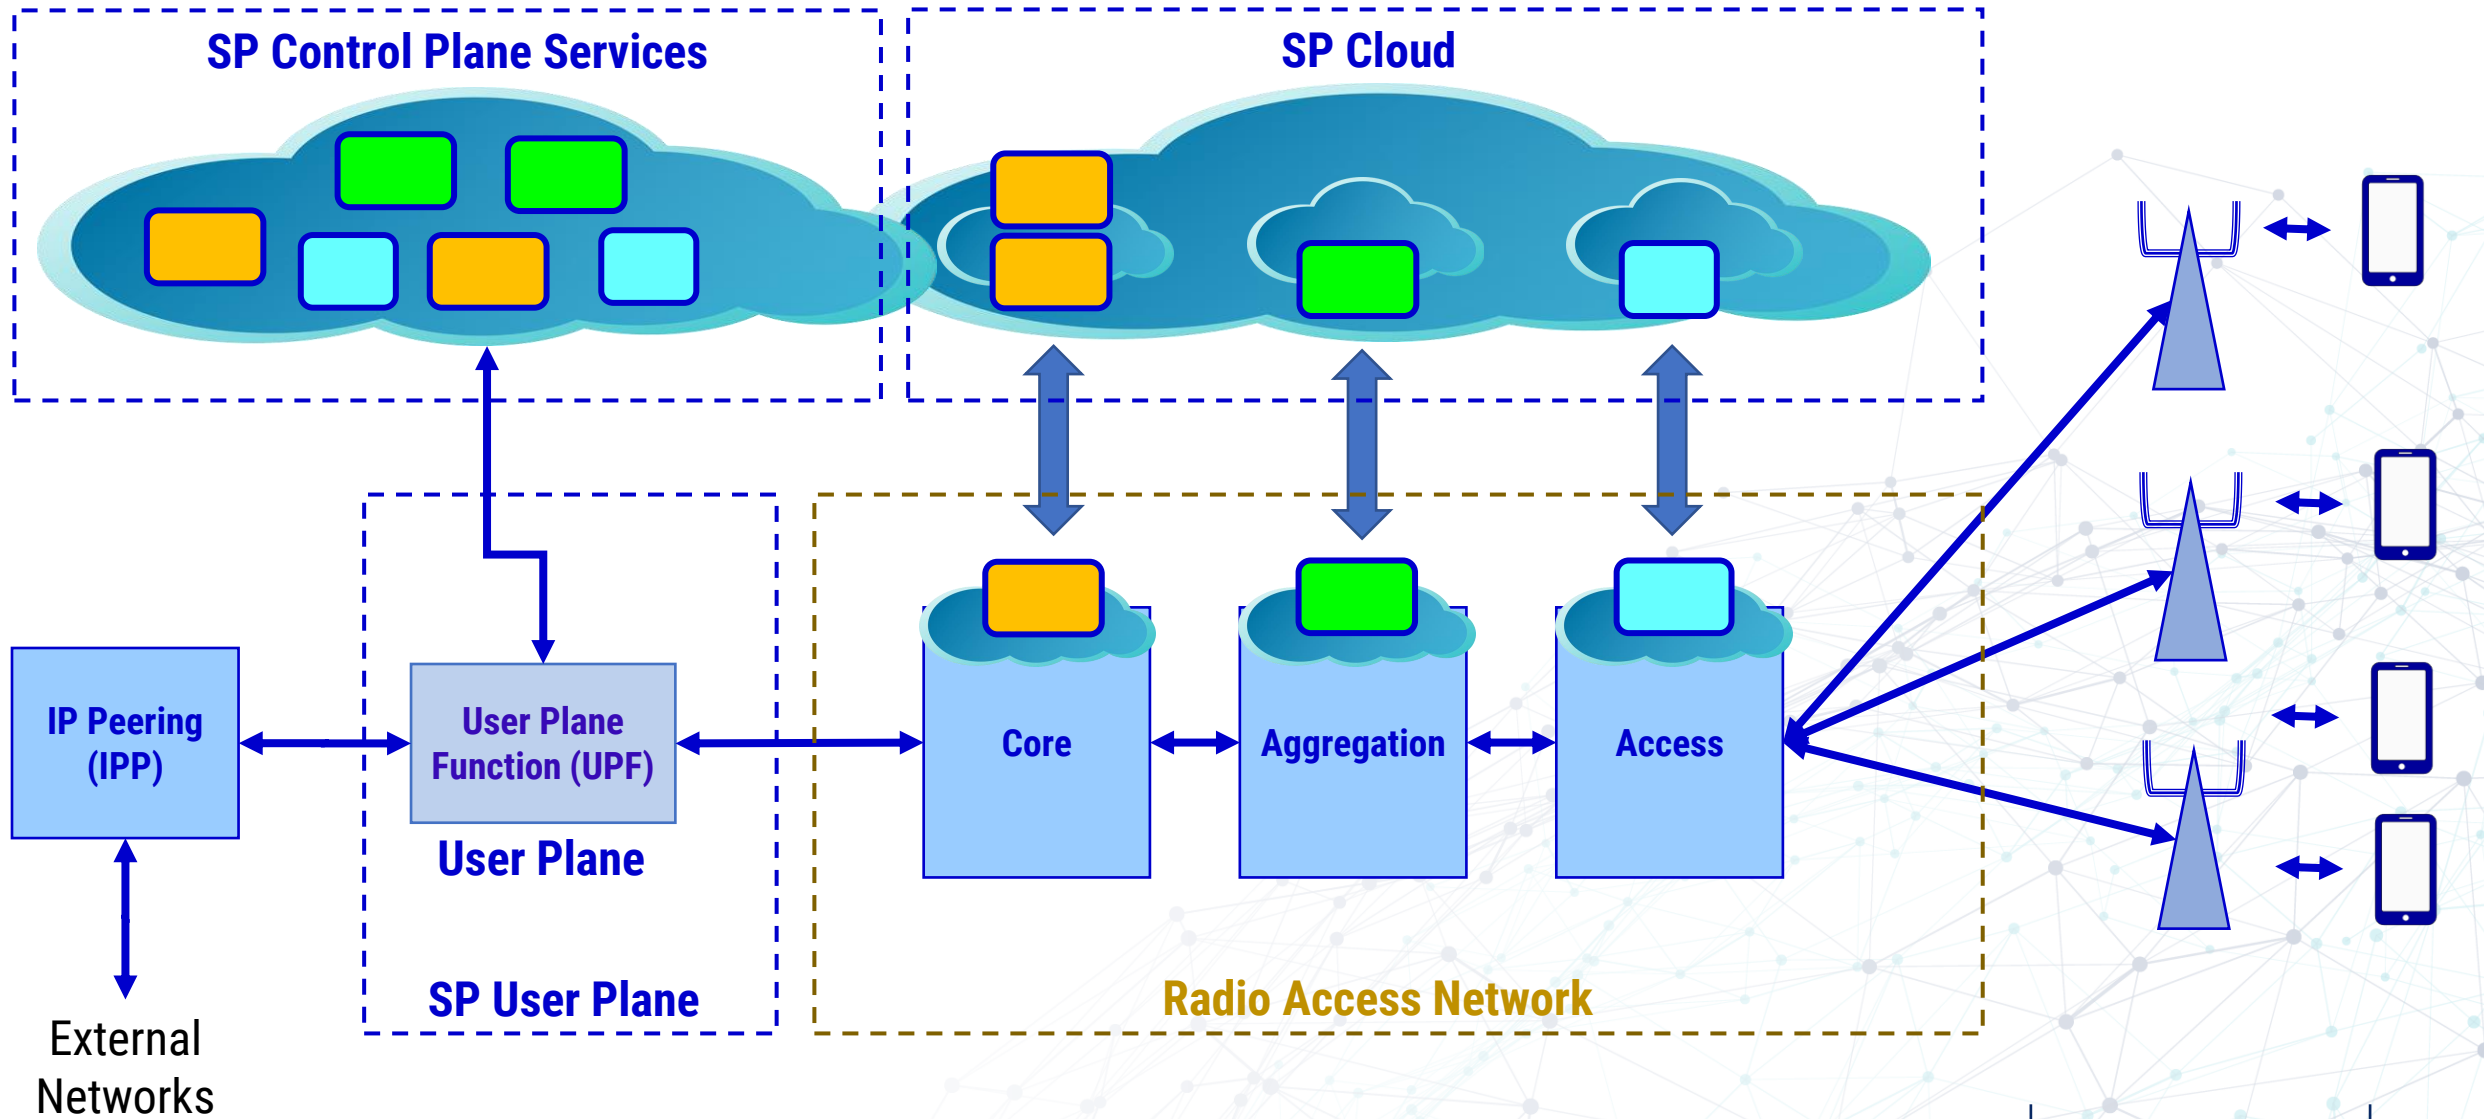

URLLC (Ultra-reliable and Low-latency communications)

- Public safety
- Medical devices
- Industrial automation

➔ Low delay
Ultra-high reliability

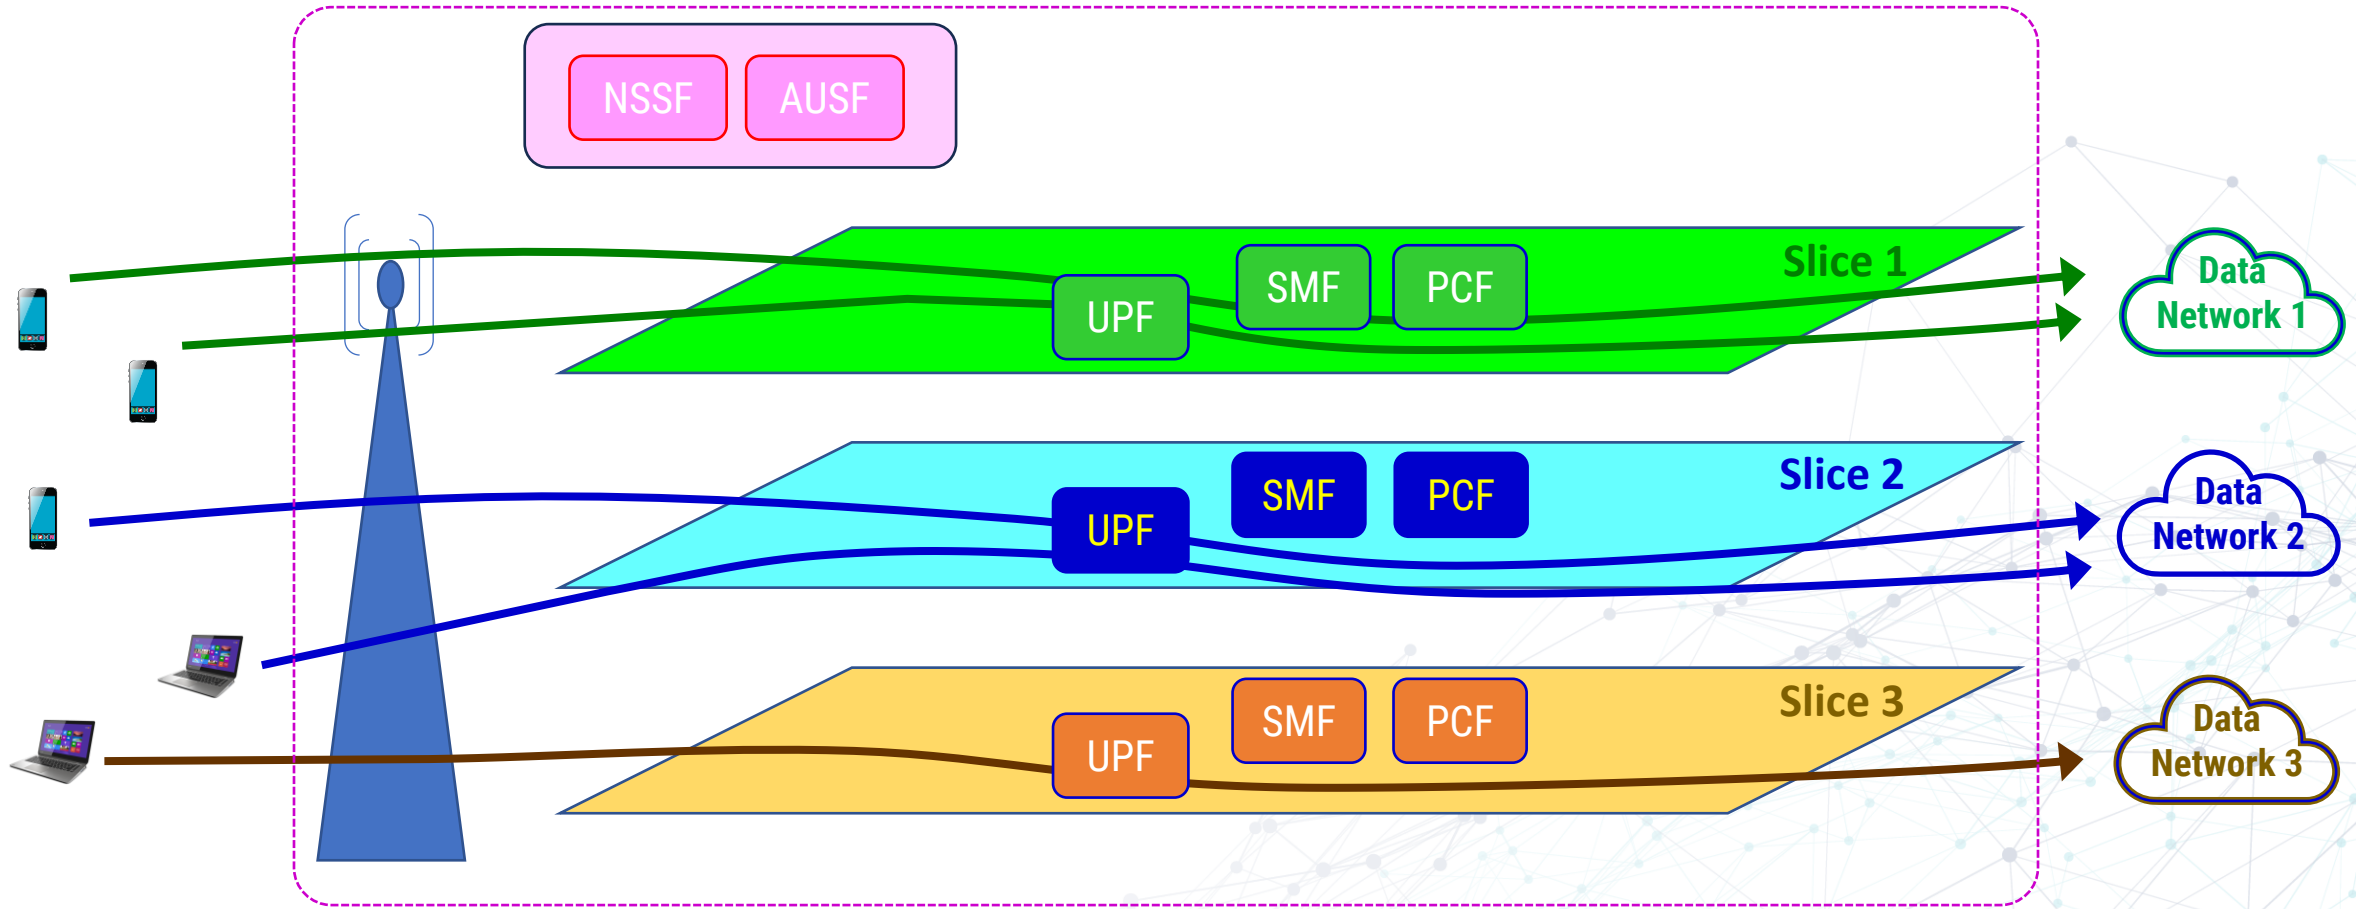

The Overall Picture

5G networks - the overall architecture

Enabling Technologies – Network Slicing

Different networks for different purposes, user mapping to each

NSSF – Network Slice Selection Function
AUSF – Authentication Server Function
UPF – User Plane Function
SMF – Session Management Function
PCF – Policy Control Function

"Three things cannot be long hidden: the sun, the moon, and the truth. "

Buddha

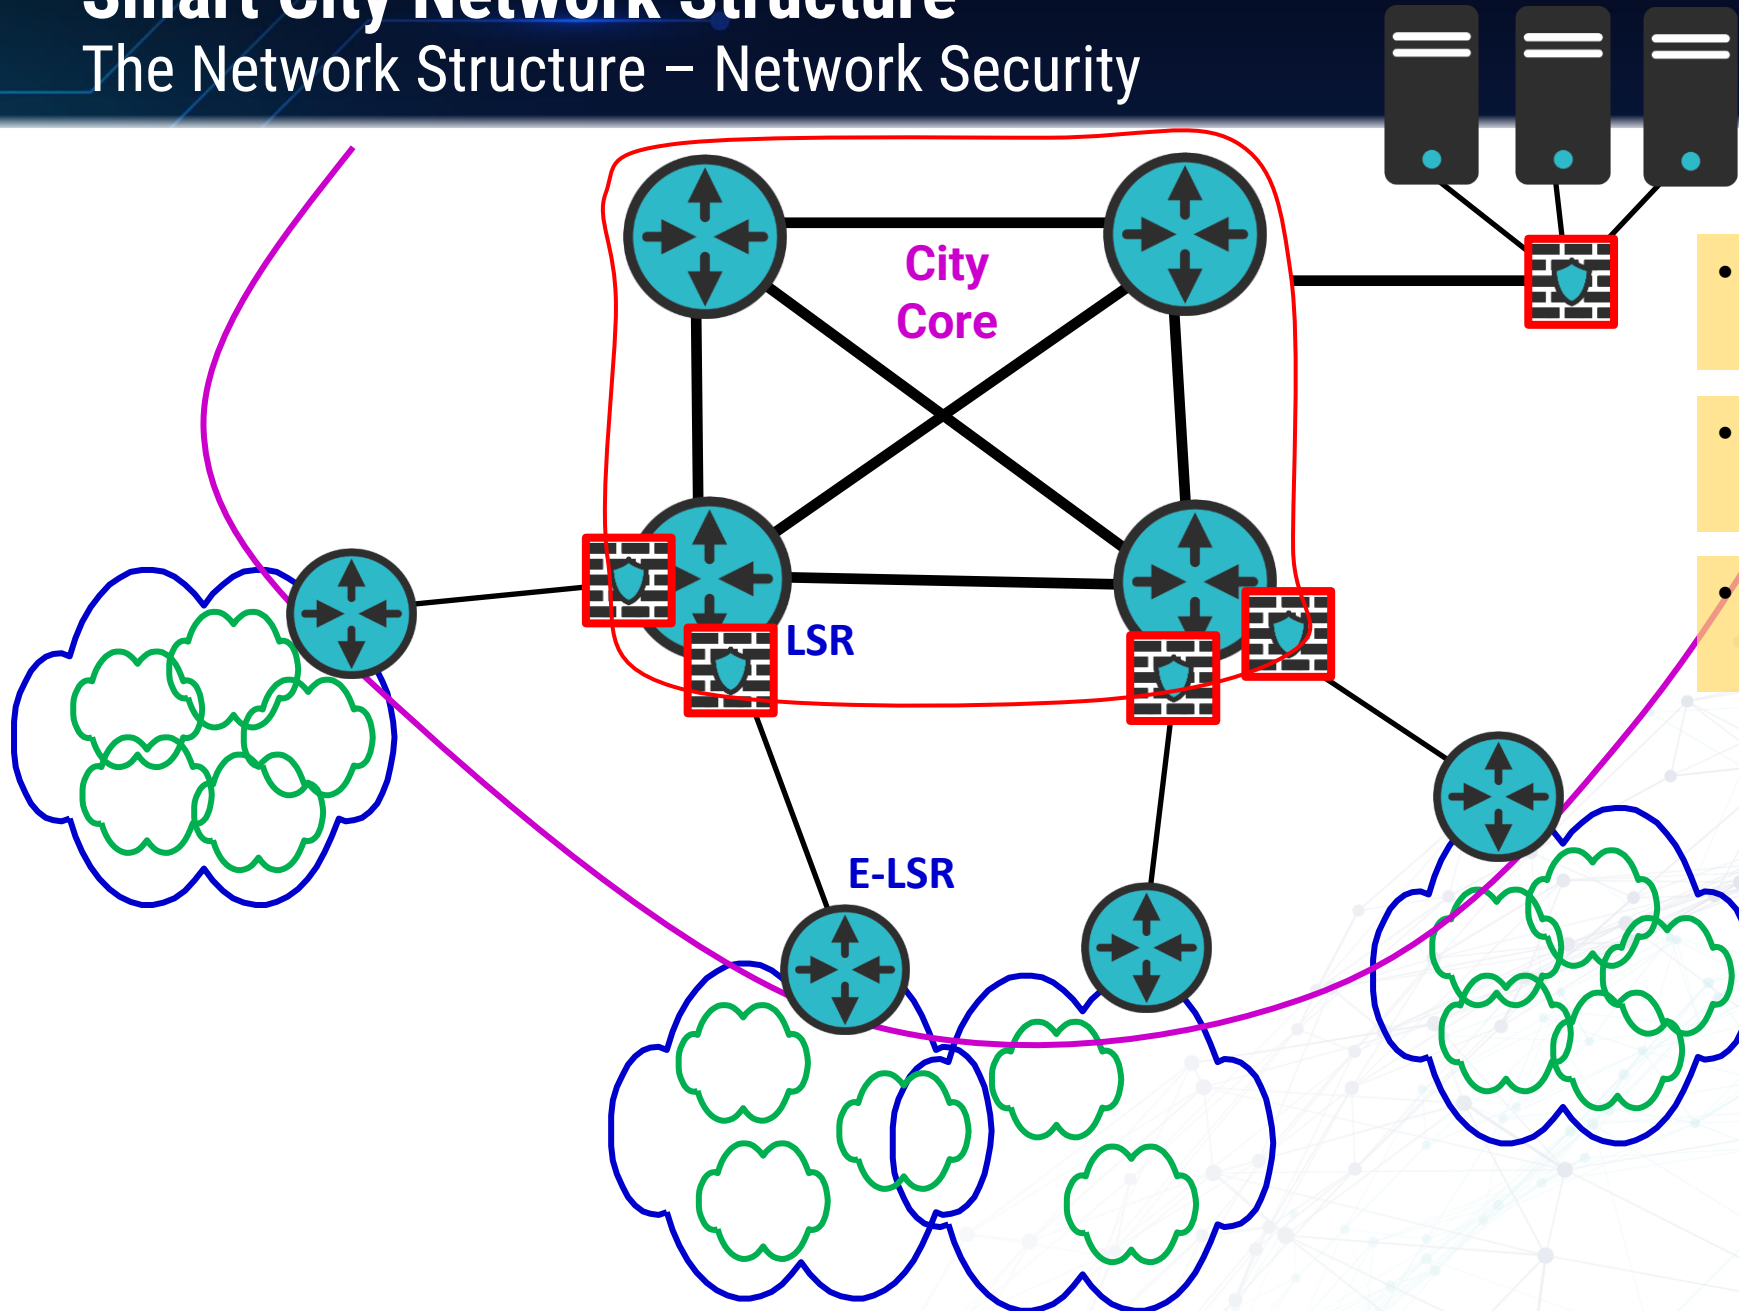

Lecture Contents

- Smart City Structure and applications requirements
- Smart City network structure
- Communications technologies for the smart city networks
- Survivability and security

Smart City Network Structure

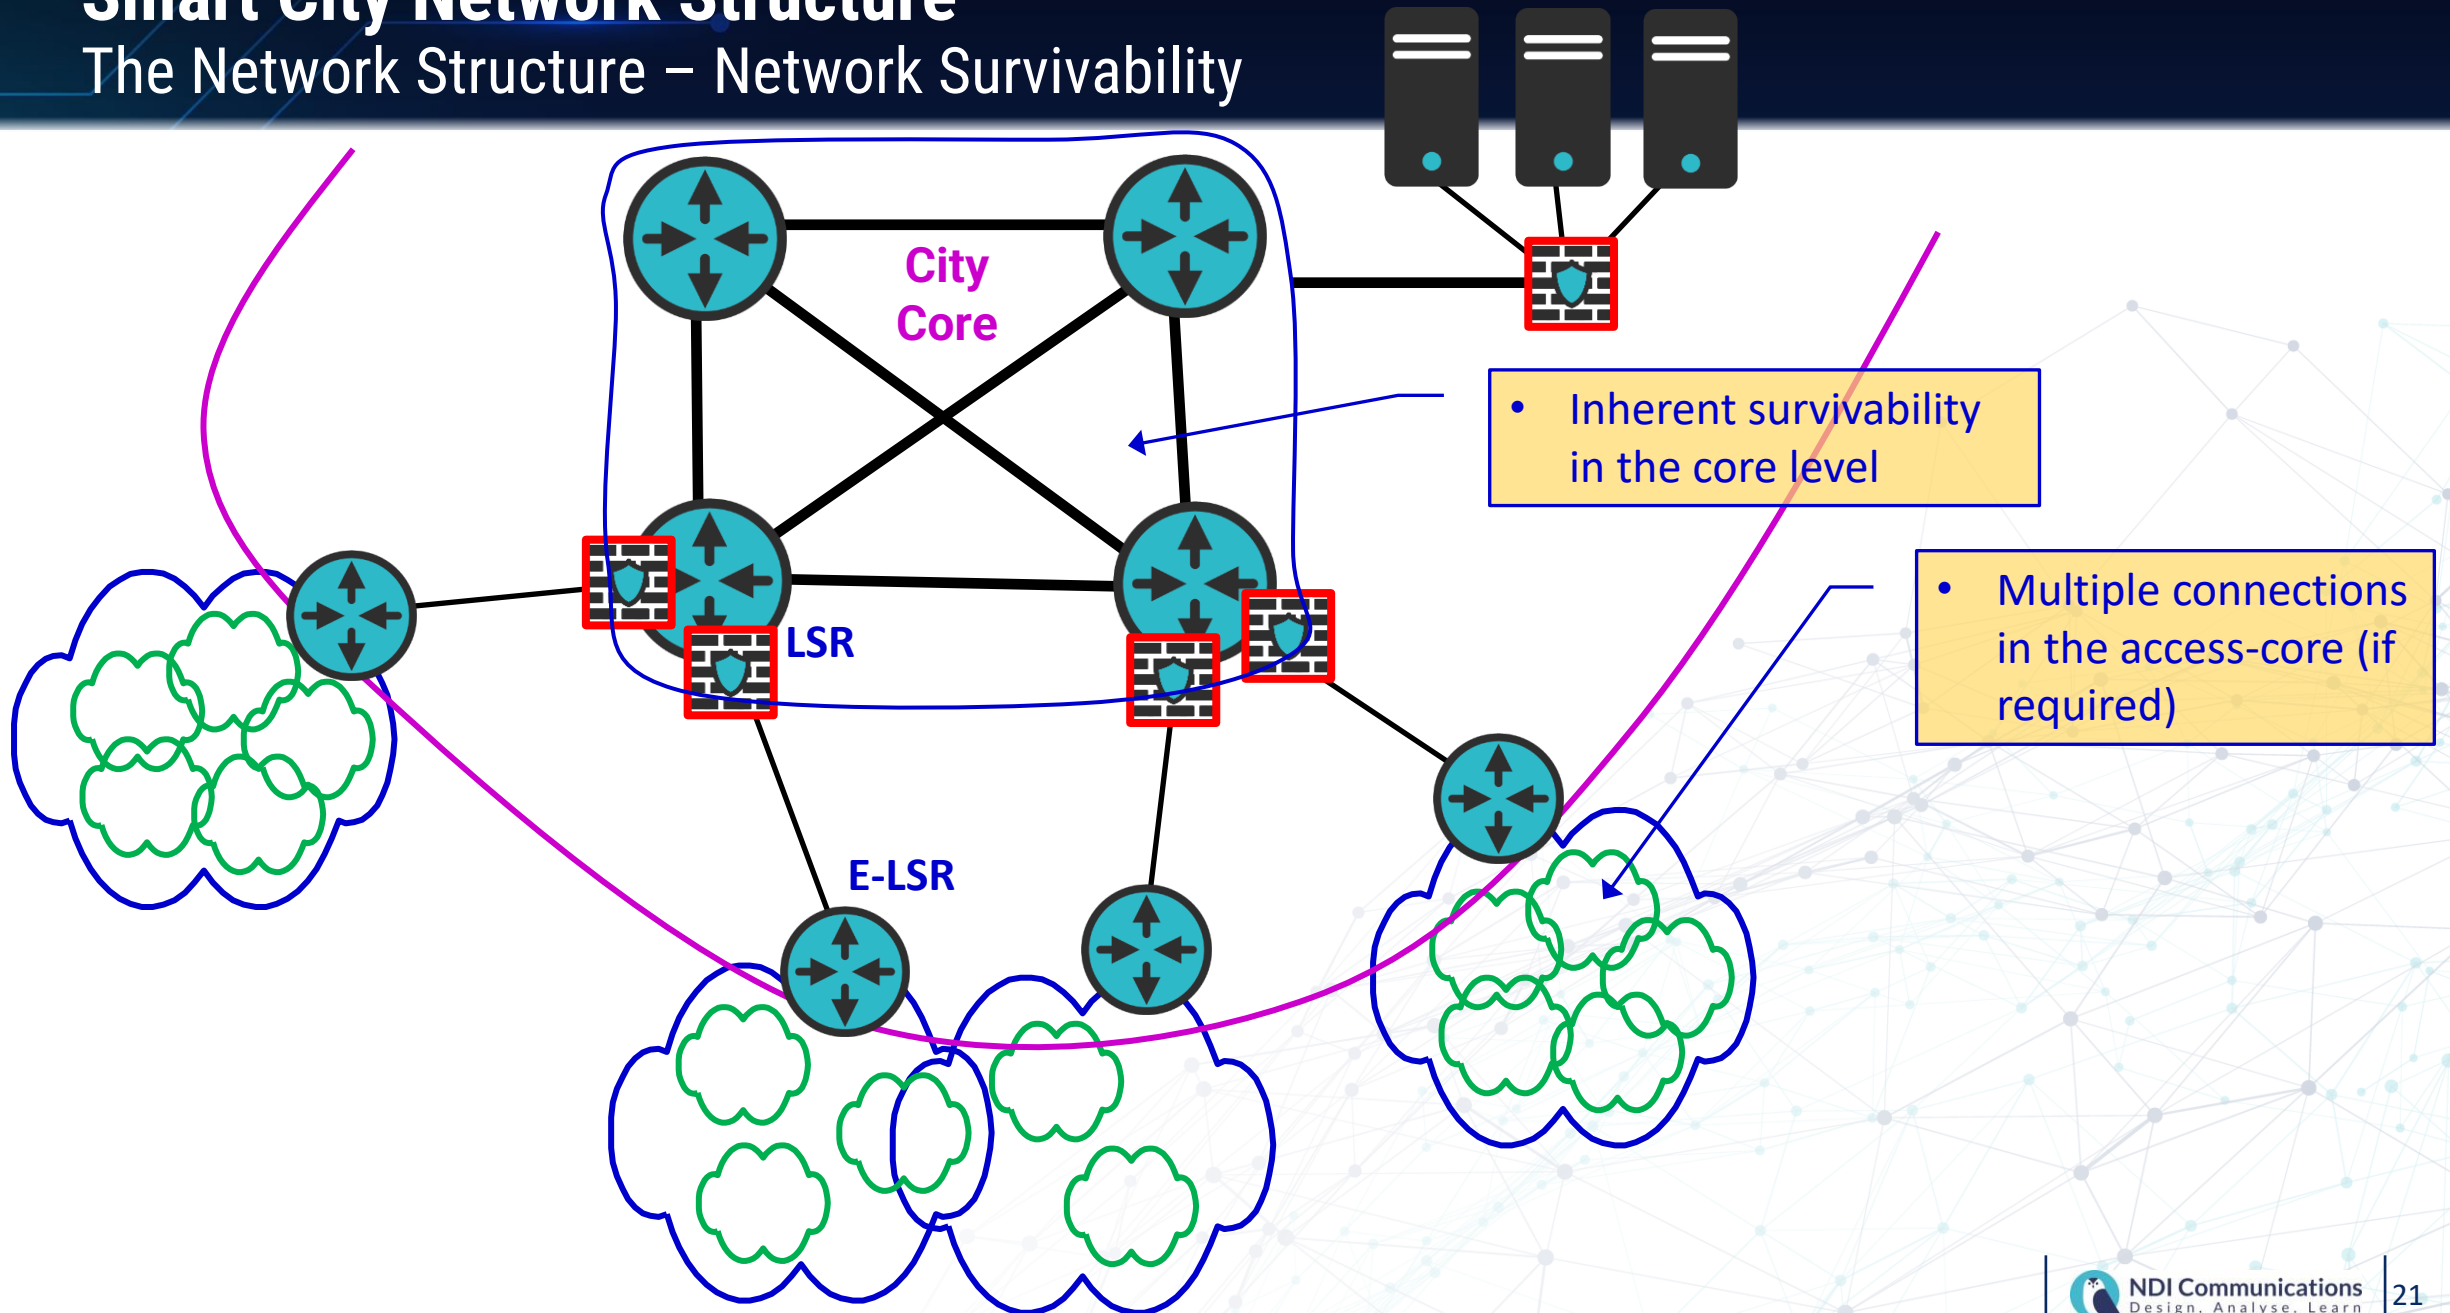

The Network Structure – Network Security

- FW features protection on multiple levels
- Packet analysis and application FWs protection on Data Centers
- Behavior analysis on multiple points in the network

Smart City Network Structure

The Network Structure – Network Survivability

Summary

Various applications with various performance and availability requirements

MPLS and Carrier-Ethernet at the core network, Cellular, Wi-Fi and IoT technologies at the access network

Security achieved by standard protection mechanisms and behavior analysis

Thanks
