# Low Code/No Code

# Can It Support The Business Acceleration?

**Sigalit Shavit** 

Jan-2024

# THE DRIVERS

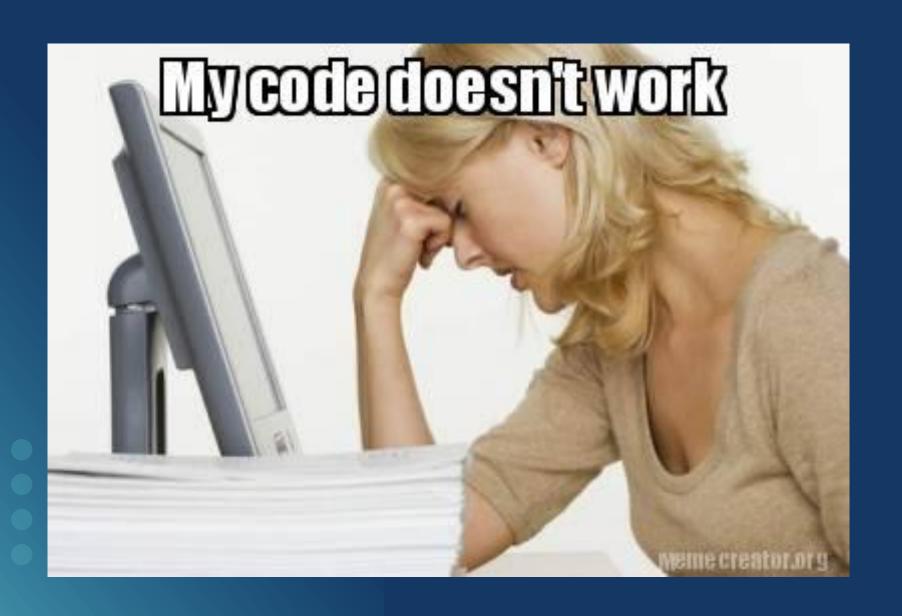

**DIGITAL TRANSFORMATION** 

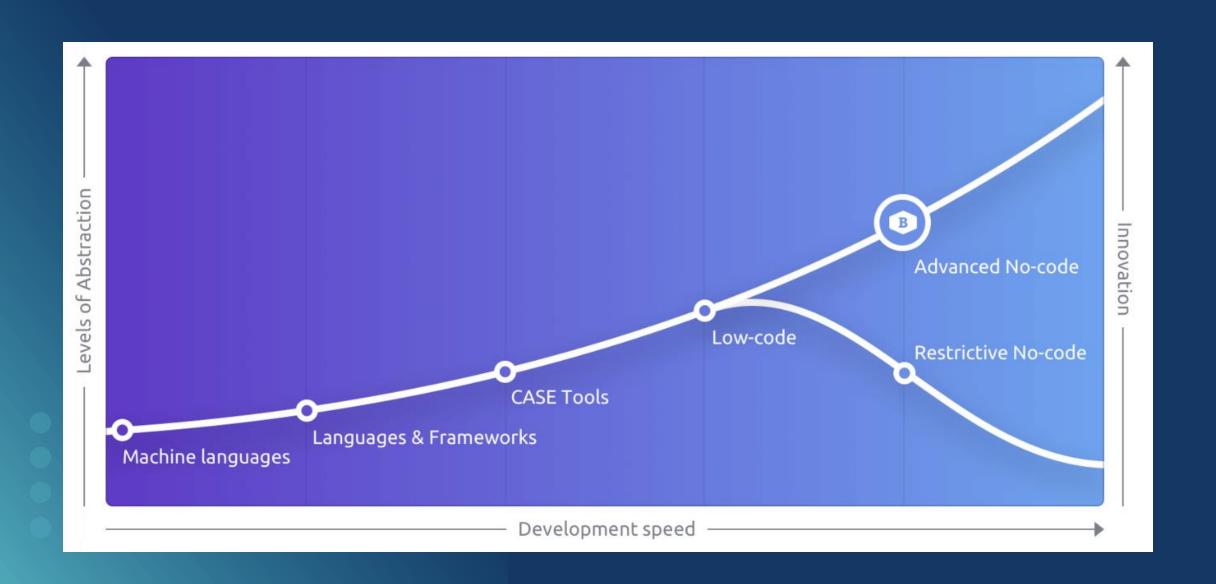

**SCARCE RESOURCES** 

# LONG NIGHTS.....

# **Evolution of Simplification & Abstraction**

# WHAT IS IT?

### **IN NUMBERS**

10X

DEVELOPMENT
SPEED WITH LOWCODE COMPARED TO
TRADITIONAL
METHODS

Forrester

**65%** 

PERCENTAGE OF
SOFTWARE
DEVELOPMENT THAT
WILL BE USING
LOW-CODE BY 2024

Gartner

3X

GROWTH OF LOW-CODE DEVELOPERS COMPARED TO TRADITIONAL DEVELOPERS

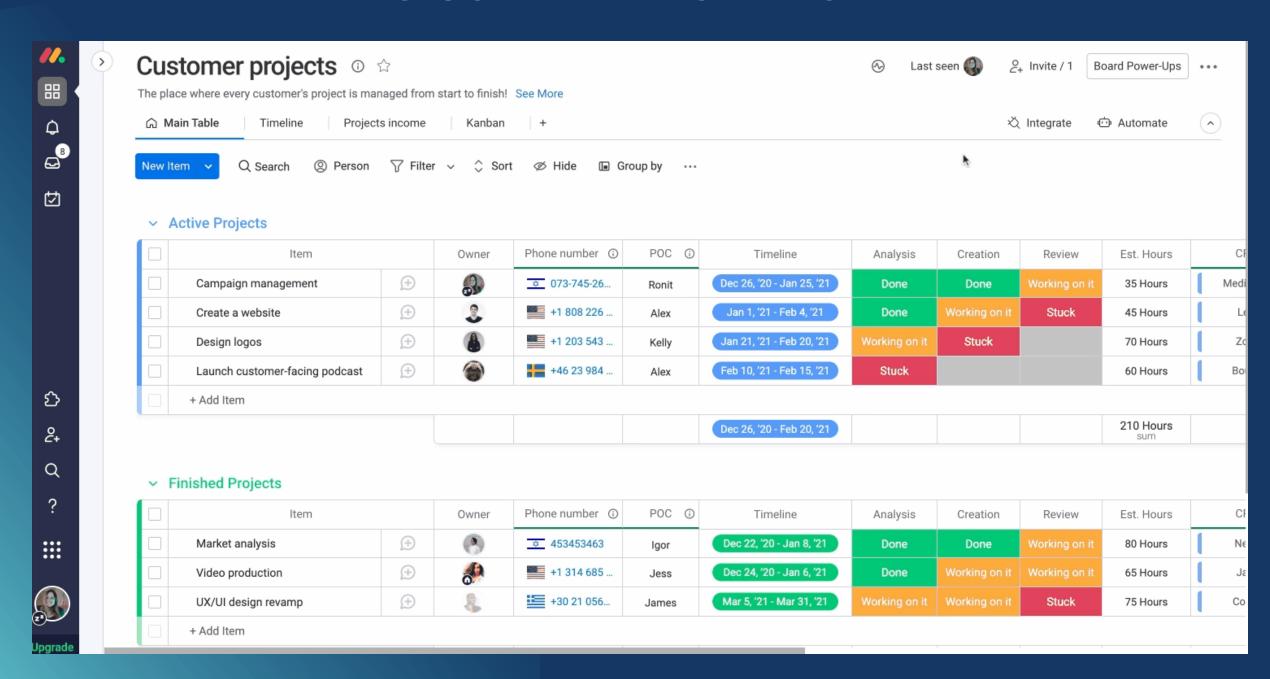

IDC

Examples

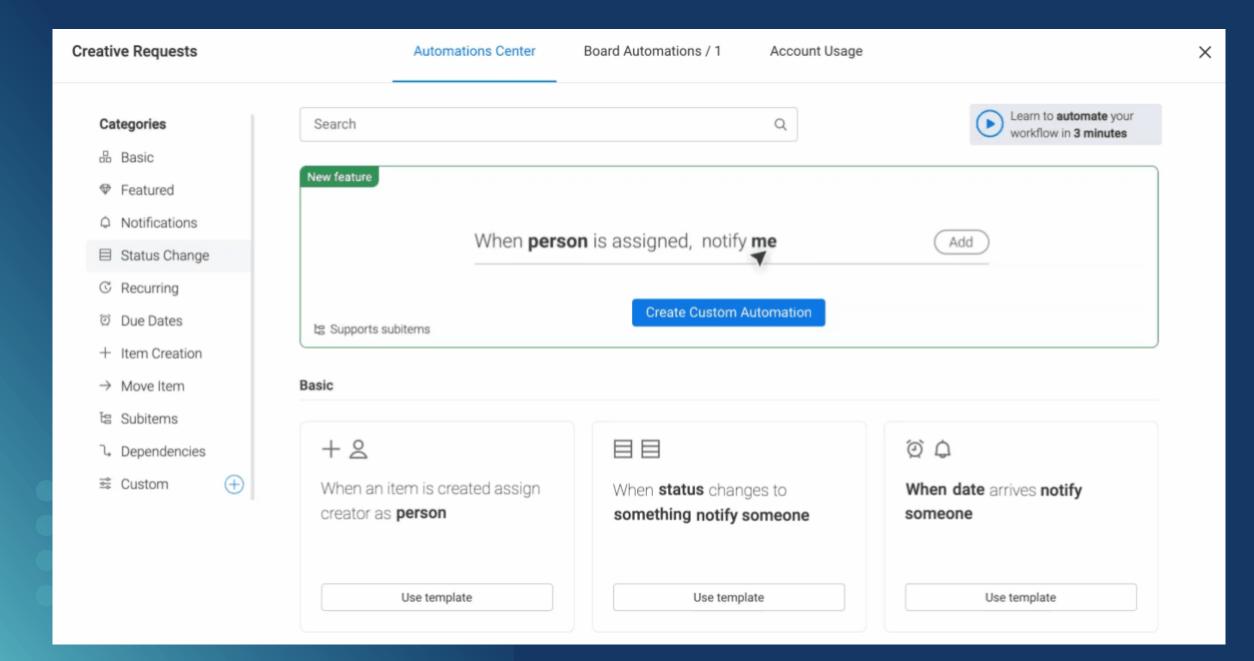

**Impact** 

Yes or No

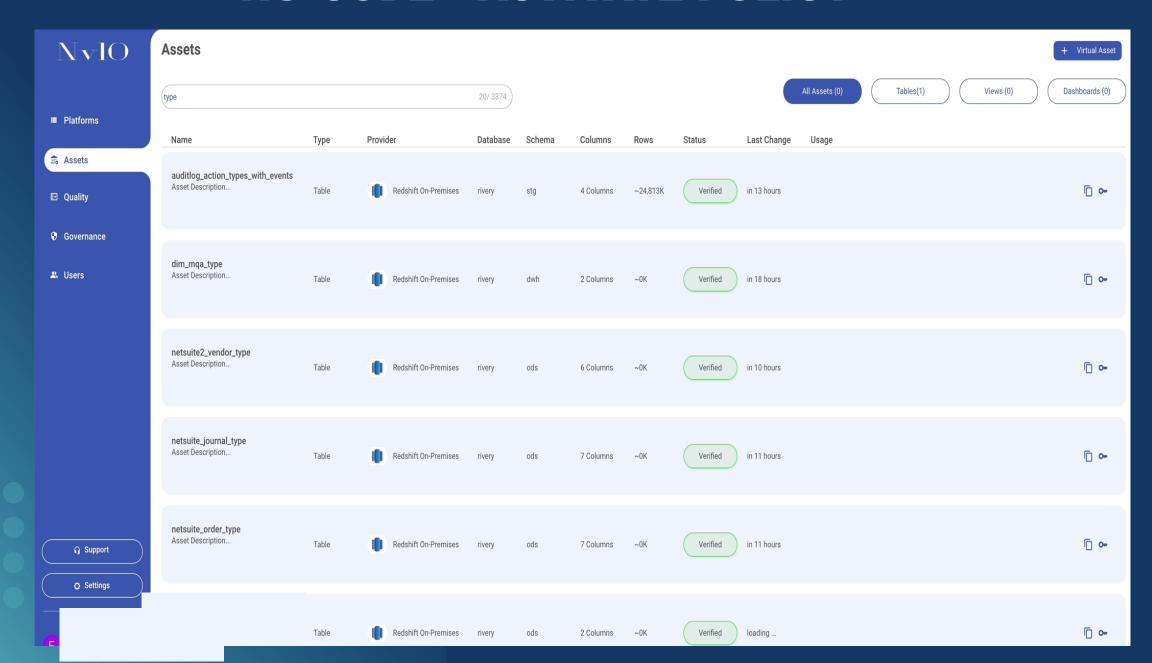

#### **NO CODE - INTEGRATION**

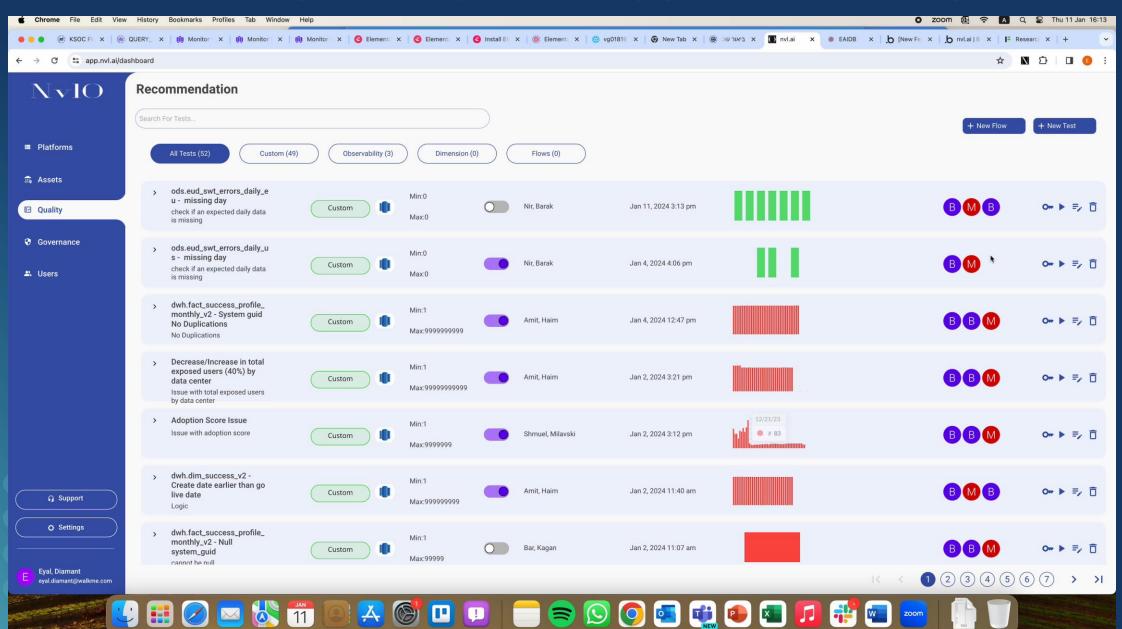

#### **NO CODE - AUTOMATIONS**

#### NO CODE - ACTIVATE POLICY

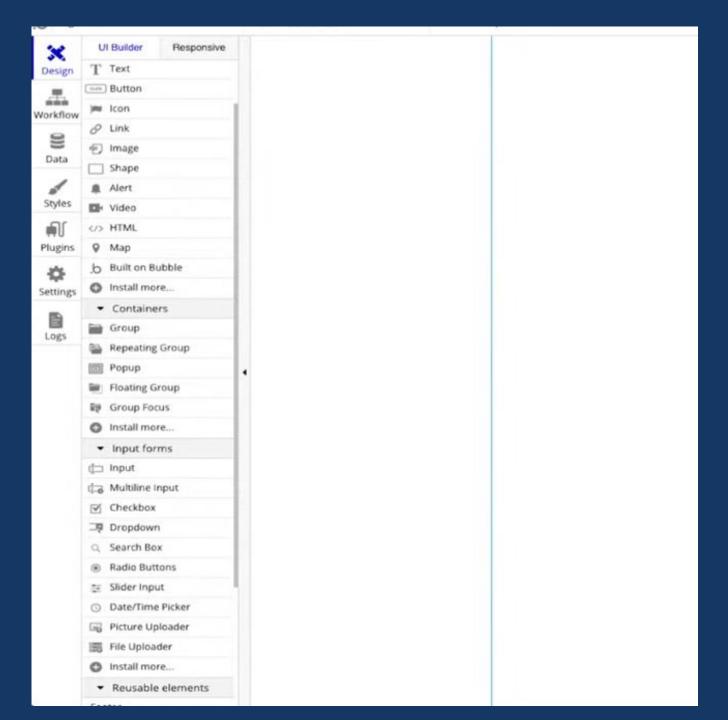

#### LOW+NO CODE - CREATE CUSTOME POLICY

Rich tools set to build quick....

- Applications
- Workflows
- Security SSO/MFA
- Connectors
- etc etc etc

Examples

**Impact** 

Yes or No

- Change mgmt.
- Code length & complexity
- Code abstraction,
   App layer
- CI/CD tools

- Business logic domain specific
- Dependencies & business interoperability
- Adaptability
- Enterprise grade
- Enterprise legacy

Accessibility & Persona

- Programmers level
- Citizen developer

Mission
Type &
Complexity

Cost in Time & Funds

- Resources availability & cost
- Time to value
- Infra & security
- Scalability & High performances
- DR, HA
- Self efficiency tools and Knowledge

#### **DEMOCRATIZATION & THE CITIZEN DEVELOPER**

- 2000 (!) Gartner **IT evolution prediction**
- One conductor and many players responsibility/accountability
- We need to re-set the stage with new and clear playground rules based on:
  - The criticality of the business solution
  - The cross-org standardization requirements
  - Organization Productivity

Use cases (*)	Citizen user	Citizen developer	Stakeholder	IT
Specific actions in the platform e.g. Can create workflows				
No/Low code ("Local")				
Dev, No/Low code (Cross platform)				
Build and CD				
Run production				
Security				
Sys Admin				
Contract				
Service Level				

<sup>(\*)</sup> Roles are broken down to use cases

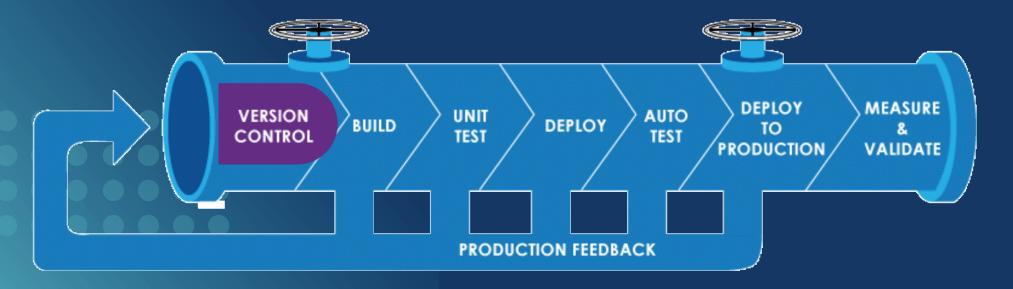

#### **SOFTWARE DELIVERY PIPE**

#### IF NO IMPACT ON.....

- CROSS BUSINESS PROCESSES & BUSINESS STANDARDS
- CROSS ORG COORDINATION AND COMMON LANGUAGE
- THE PLATFORM AND OTHER SYSTEMS STABILITY, SCALABILITY & CONFIGURATION

#### THEN

- MANAGED PIPELINE IS NOT REQUIRED
- ONLY, MAYBE KNOWLEDGE DOCUMENTATION IS IMPORTANT

#### **VENDOR SELECTION CRITERIA**

- What is the purpose?
- Use cases map (recommended: define it by persona)
- How complex in terms of architecture and solution logic
- Business criticality
- Who are the users, their skills and their solution role
- External users?
- Interfaces
- Addons in product (functionality, security, interfaces...)
- Marketplace
- Flexibility and development tools
- Roles and permissions granularity to fit your democratization approach
- Security grade
- Support terms
- Community
- Knowledge base availability and standards
- Availability
- Enhancements commitments
- License fits not just cost but also type of users
- Vendor solution positioning and installed base

## COMPARISON

Measure	No Code	Low Code	Traditional	NOTE
Fast to result?				
User Experience				Modern and standard vs. efforts
QA & CI/CD				Platform stability, Efforts, Durations
Tech Skillsets				Tech Skillsets and Resources utilization
Accessibility				
Adaptability				Grow with - Depends on the use cases!
Business complexity				
Maintenance				
Cost				Cost of ownership, Cost to delivery
Interoperability				Interfaces, Mobile
Advanced tech				Embedded
Scalability				Cloud/HW Resources, performances

Impact

Examples

Yes or No

#### NO & LOW – Yes or No

- Business acceleration
- Citizen's productivity
- IT positioning
- IT Dev & Ops shift to business layers
- Bridge legacy constraints
   OR enable gradual upgrade
- Developers' shortage and costs

- The use case matters
- Solutions autonomy turning to future headache
- Are your users ready?
- Cost of ownership ROI

# Thank You!
